Mannf crips of Ancient and Reverend Profeffors in this Art, who lived more remote fr om thefe corrupt LimeS) (ftr unto the vulgar Profeffors now reftding in this City , am I no wayes engaged ;) and though it wis.no [mail trouble unto me, tojee the discrepancy of judgment am&ngtf them and the more ancient printed Authors , yet I have with fome trouble reconciled their dij agreements, and reformed and corrected what might' have led the Reader into an crrour : for indeed the Writings sf cur Fore- fathers in the Language they did deliver their minds in> • was found and Jolid2 but the fimpUcity cf fuch as undertook i the travjlatms was much and did beget mitfakes, wbileft they endeavouring to trarfiate the Authors into Latin , or any other Language they thought fit , did not urldcrfland the Art or the Termes thereof ; Jo that of th their Labour they rendred an iH accompt unto Poller iiyy as any may fee in the translation of that we call the Judicium in Novem Judiciis, and in other pieces of Aikindus, one whereof lately a learned Gentleman gave me , guilty of the fame deficiency in the translation.

In this fec&nd Eook^ I have omitted nothing which I could devife to be helpfully and if my onneway of judicature p/cafe any , it being fome - what different from that -of the Ancients, he may in many Chapters make ufe of it, I have illulfrated every houje with one or more Figures and therein fbewed the method of judgment , which I held very convenient for Learners ^ it being my whole intention to advance this Art, and make even a jlctider wit capable hereof.

Ton may in the third Eoo\hehcld the entire Art of Nativities, I

On this unfardelled peece of Art.

NOt to commend the Author, ’tis the lead:

Of all my thoughts, this Work will doe it beflj
Nor yet to vex the prying Readers fence
with bumbaft words inftead of Eloquence,

Doe I crowd in thefe rude unpolifht lines :

But rather to informe the giddy times
How much they are his Debtors ; what they owe
To him, whofe Labours freely doth bellow
On them his Art, his paines, his piercing fight.

His lampe of life, to give their darknefle light.'

Tis now a crime, and quite grown out of fafhion,
T'incouragc Art amongftthe Englifb Nation.

Tell them of it, or N atures myfteries,

Tufh, cry they ' Ignorance they idolize.

The glorious Stars, they think God doth nor ufe them
To doe his will : Lord / how doe men abufe them ?
Nor will allow the Planets to fulfill

(As inftruments) Gods high decree or will.

Nay, feme there are, though letter wife, they can
Not yet beleeve that all was made for Man.

Barke black-mouth'd Envie ; carpe at what's well done.
This Booke lhall be my choyce companion.

Chap. I.

^he number of Flatlets^ Signes^ Aj} ecis 3 with their [ever ail Names ar
Characters*

>N the nrft place you mud know that there
are (even Planet^ To called and chara¬
ctered.

, Saturne T? > Jufitery 5 Mars S 5
Venus 2 > Mercury. £ 5 Luna l : there is al-
fo the Head of the Dragon 5 thus noted Cl ;
and the Taylc y • Cl and y are not Planets
but Nodes.

There be alfo twelve Signes : Aries T , 3 Gemini H 3

Cancer ZB) Leo Sl9 Virgo W 3 Libra & ? Scorpo nt5 Sagittarius
S, Cafr Lomus *vy, Aquarius zz 0 Frees X : Through thefe
twelve Signes the Planets continually move3 and are ever in
one or other degree of them. It's neceffary you can perfectly
diftinguilh the character of every Planet and Signe, before you
proceed to any part of this ftudy ; and alfo the characters of
thefe AfpcCts that follow* viz* □ A <P S .

D You

Youmuft know, every Signe containes in longitude thirty
degrees, and every degree flxty minutes, 8cc. the beginning is
from T , and To in order one Signe after another : fo the whole
Zodiack containes 360. degrees, the fecond degree of # is the
the two and thirtieth degree of the Zodiack, the tenth of # is
the fortieth, and fo in order all throughout the twelve Sigftes ;
yet you tnuft ever account the Afpeds from that degree of the
Zodiack wherein the Planet is/ as if h be in ten degrees ofn ,
and I would know to what degree of the Ecliptick he cafteth
his finifter Sextil Afped ; rekoning from T to the tenth de¬
gree of H , I find 7? to be in the feventieth degree of the Zodi¬
ack, according to his longitude 5 if i adde fixty degrees more
to feventy, they make one hundred and thirty, which anfwers
to the tenth degree of the Signe SI , to which T? cafteth his
Afped, or to any Planet in that degree.

When two Planets are equally, diftant one from each other, fixty degrees, we fay they are in a Sextil! Afped,and note it with this charader .

When two Planets are ninety degrees diftant one from ano¬ ther, wee call that Alped a Quartill Afped, and write it thus, d »

When Planets are one hundred and twenty degrees diftant, we fay they are in a Trine Afped, and we write it thus A .

When two Planets are one hundred and eighty degrees di¬ ftant, we call that Afped an Offofition , and charader the Alp^d thus cP :

When two Planets are in one and the fame degree and mi¬ nute of any Signe, we fay they are in Conjundiony and write it thus .

So then if you find 7? in the firft degree of T , and D or any other Planet in the fir ft degree of H , you (hall lay they are in a St xtill Afped, for they are diftant one from another fixty de¬ grees, and this Afped is indifferent good.

If h or any other Planet be in the firft degree ofT , and ano¬ ther Planet in the firft degree of $, you rauft fay they are in a P Afped, becaufe there is ninety degrees of the Zodiack be¬ twixt them : this Afpect is of emnfty and not good.

If h bs in the firft degree of and any Planet in the firft

degree

f

degree of SI , there being now the diftance of an hundred and twenty degrees, they behold each other with a Irine Afpe& j and this doth denote Unity, Concord and Friendftup.

If you find h in the firft degree of T , and any Planet in the firft degree of they being now an hundred and eighty de¬ grees each from other, are Paid to be in Offofition : A bad Afpeft: and you muft be mindful! t© know what Signes are oppofite each to other, for without it you cannot ere& the

Figure. –

When h is in the firft degree of T 5 and any Planet is in the

fame degree, they are then faid to to be in Conjnnfiion : And

this Afped is good or ill, according to the nature of the quefti- on demanded,

Signes Off o fit e to one an another are

r # n s a w

a HI vy » K

That is V is oppofite to , and ~ to V j to HI , fit to : and fo in order as they ftand.

I would have all min well and readily apprehend what pre- yfatwAits cedes,and then they will moft eafily underftand theEphemeris; * which is no other thing, then a Book containing the true pla¬ ces of thePlanets,in degrees and minute$,in|every of the twelve Signes both in longitude and latitude, every day of the yeer at noon, and every hour of the day, by corre&ion and equation.

I have inferted an Ephemeris of the moneth of January 1 646 and after it a Table of Houfes for the latitude of 52. degrees, which will ferve in a manner, all the Kingdome of England on this fide Newark^ upon 7>e«f, without fenfible errour ; and this I have done of purpofe to teach by them, the ufe of an Ephe¬ meris, and the manner and meanes ofere&ing a Figure of Hea¬ ven, without which nothing can be knowne or made ufe of in Aftrology.

Chap. II.

Of the ufe of the Efhemerif .

**r

He firft line on the left-hand page, tels you, January hath 31. dayes,

D 2 la

T

In the fecond line you find. The daily motions of the FTa wets and the Dragons head.

In the third line and over the chara&er of 1? you have M D M. fignifying Meridional!, D. DefcenJingi that is,- 7, hath Meri- dionall latitude5 and is Delcendingo ,

In the next column you find M. D. and underneath v 5 that

is, Jupiter hathvSoueh jw Meridional! latitude, : and -is def- ceqding.

In the third column you find M. A. and under thofe letters A j that IsdVhath Meridional! latitude, and is afeendim?

The 0 Hath never any latitude; .

Tn the next column to the ® you find 9 and then ^3with the tftle of their latitude : Now if over any of the Planets you find S. A. or D. it teTs you that Planet hath Septentrional! or North latftu demand is either afeending or defending, as the letters A. or D. do manifeft.

fourth line'yoo-fee T, f . <? © y 5 j a. now you mult obferve ever, the a is in the oppofite Signe and degree to the Si , though He is never placed in the Ephemeris. °

In the fifth line yxiu have r H v? vy K- “ 1H 51 : OverT you have T, , that is to acquaint you, that h is in the Signe of T : Over n you have V , -viz. ¥ is in the Signe of n : And fo

over v? (lands d: And fo of all the reft one after ano-
ther.

Tn the fixtdineyou have the figure I. telling of you ids the

firft.day o £ January > and fo underneath it to the lower end,yoti
Have the day of the moneth. , ■

Next to the Figure o«e, you have the letter A, which is tha
letter.oi the day of the week j and if you run downe under that
column, you fee the great letter to be D, which is the Sunday
nr Doniimcall letter of the yeer 1 646.

Over againft the firft day of January under the charafter of
Vi you find 27. 48. over thole figures you lee T 5 the meaning
as, H is the firftdayof January in -27. degrees and 48. minutes
©r T : now you muft oblerve* fixty minutes make one degree,
and that when anyPlanet hath paffed thirty degrees in a Signe*

ae goeth orderly into the next 5 as out of V into , out of x*

inton.&c. - 7

* >

, ■ "

In the fourth column, over againft the firft of the moneth,
you find 28 R 1 2, over them JL , and over it V ; that is, % the
firft of January is in 28 degrees of H and 12 minutes : The let¬
ter* R. tels you that he is Retrograde ; had you found Di. or D.
it had told you he was then come to be Direft in motions Of
all thefe termes hereafter by themfelves.

In the fifth column you find 10 5, over thofe figures vp cT,
viz* & is the firft of January in the tenth degree and five minutes
of ♦ -

And fo by this order you find the® to be in 21 degrees, and
3 4 minutes of v? ; and 9 in 5 degr. 7 min. of X ; 9 in 5 degr.

and 29 min-of ss ; the j) in 21 23 of Til ; a in 12 deg. and 34 min. of SI .

So that you fee on the left-hand page, there are ten feverall * columns ; the firft containing the day of the mOntth ; the fe- cond, the week-day letter ; the third, the degree and minutes ' of h ; the fourth containes the degrees and minutes If is in ; and lb every column the like for the reft of the Planets.

Over againft the tenth of January , under the column of the ®, you find 0^14 minutes, which onely Iheweth youthe ® to be that day at Noon, in o degrees and 14 minfutes of ^ , &c.

In the lower end of the left-fide page, after the 3 1 of Janx - ' ary you find Lat. of Pla. that is, the Latitude of the Planets. '

Under the letter C you find 1 10 20.

Under the column of T? over againft 1, you find 2 3 1 5 then continuingyour eye, you have under if 0*5 ; under d*o 47 ; under $ 1 13; under 9 1 45. The meaning hereof is, that the firft day of January T? hath 2 degr: ana 3 1 min: of latitude ; If o degr: 5 min: d" o degr: 47 min; 9 1 degr: 1 3 min: 9 idegr: 45 min: of latitude : To know whether it is North or South, caft ' your eye to the upper column, and yoirmay fee over the cha- rafter of 1? ftandsM.D. that is. Meridional! Defcending, or South latitude; where you find S~. it tels you the latitune is North ; if you find A. the Planet is Afcending in his latitude; if Da then Defcending, * .-/*

Chap. III.

7'be right-hand page of the Ephemeris unfolded .

THere are eight columns : the firft contains the dayes of the moneth; the/ fix next containes the manner, qualityand name ofthofeAfpefts the 2) hath to the Planets j as alfio, the hour of the day or night when they perfectly meet in Afpeft ; the eighth column hath onely thole Alpe&s which T? V ®

5, 5 make to each other, and the time of the day or night when.

In the fourth line under h you find Ocdd.thstt is, 7? is Occiden¬ tal! of the © , or fiets after him } and fo of % , or where you find Occid. it noteth as much.

Under c? you find Orient, that is, d* is Oriental or rifeth be¬ fore the ® . And fo at any time.

For better undemanding the true time when the }> comes to the A fpeft of any Planet, you are to obferve, that all thole that write Ephemerides, compute the motion of the Planets for the noon time, or juft at twelve : And you mull know, we and they ever begin our day at Noon, and fo reckon 24 hours from the noon of one day to the noon of the next and after this manner you muft reckon in the Afpe&s. As for example :

Over againft the firft of January 1646. which is Thurfday, and under the column appropriate to the ® , you find ^ o.The meaning whereof is, that the D is in ^ afpeft with the © that firft day o $ January at noon, or no hours P. M. or Pofi Me¬ ridiem.

Over againft Friday the fecond of Ianuary , you find under the column of $ □ 6. and on the right hand over againft the fame day, under 5 >g 9. which is no more then this, viz. the fecond of January at fix a clock after noon, the l comes to the □ or Quartill afpeft of $ 5 and at nine of clock ftie meets with the * of 5 . f . .. .

Over againft the fixt day of January , being Tuelday,under T? you find □ 1 4.that is,fourteen hours after noon of that day,the 2) comes to the □ of h : now you may eafily find,that the four¬ teenth

teenth hour after noon of Tuefday3 is two of clock in the mor- Rihg on Wednefday.

A<*ainc5 under the column of the® you find# 1 1 48. which

Is no more but this, the J> comes to d with the ® at 48 minutes after eleven of clock at night : now you niuft know the D her d with the © is her change, her next □ after d with the © is the firft quarter, her d with the © Is full]> , her □ after cP is her quarter.

If ydti nuderftand but this,that thirteen hours is one of clock 5 the day ftibftquent, fourteen hours two of clock, fifteen hours three of clock in the morning, fixteen is four of clock, feven- taen hours is five in the morning, eighteen is fix of clock, nine¬ teen hours is feven of clock, twenty hours is eight in the mor- ninsj, twenty one hours is nine of clock, twenty two hours af¬ ter noon is ten of clock the next day,twenty three hours is ele¬ ven of clock, See. Now we never fay twenty four hours after noon, for then it's juft noon, and if we fay go. 00. after noon that is juft at noon, or then it's full twelve of clock: Under¬ hand this and you cannot er re.

In that column under the Planets mutual! Afpc&s, over againft the third o flanuary being Saturday, you find >i< 7? V 21 that is h and V are in afpeft 2 1 hours after noon of the Sa¬ turday 5 and that is, at nine of clock on the Sunday, morning

following. , . ,

Over ag unft the fourth day you find !>' Apgtum, that is, Ihe is then neereft to the earth : over againft the eighteen! h day in the outmoft column you find 3) Tctig^on^ that is, the 3) is then

moft remote from the earth.

Over againft the twelfth day, in the fame outmoft column, you find 9 in Elong . Max. it ftiould be V in Maximt Elongatione , or that day 5 is in his greateft elongation or diftance from

:■» 45678 9 ;

So that the tenth houfe is oppofite to the fourth, the fourth to the tenth * the eleventh to the fifth,the fifth to the eleventh, and fo all the reft as you find placed : The ufe you are to make of it is this. That if 03 the Cufp of the tenth houfe you find the Signe T , then muft you place on the Cufp of the fourth the Signe & ; and look what degree and minute poffefleth the Signe of the tenth houfe, the lame degree and minute of the oppofite Signe muft be placed on the Cufp of the fourth houfe, and fo of all the other Signes and Cufps of houfes 5 and this is generall, and ever holdeth true ; without which rule obferved, you cannot ere&: the Figure aright.

In our former Figure you fte 1 9 zz on the Culp of the tenth A hoefe.

houfe, Si is oppofite to zz ,f and the fourth houfe to the tenth 5 fo then I place the 1? degree of Si upon* the Culpe of that houfe.

Upon the line or Culp of the eleventh houfe you lee X 17 6 is the Signe oppofite to K, and the fifth houfe to the ele¬ venth ; fo that I place the 17 degree and 6 minutes of W upon the Culp of the fifth houfe.

The Cufp of the twelfth houfe is the 1 1 37 of , I fee Til is oppofite to ^ , and the fixth houfe to the twelfth } I there¬

fore put the 1 1 degree and 37 minutes of m. on the Cufp of the fixth houfe.

1 doe fo in the reft of the houfes, and by this meanes I have framed the twelve houfes, and placed the fever all Signes of the Zodiack upon the Culps as they ought to be.

Having linilhed your twelve Houfes by the Method prece¬ ding, you muft now learne to place the Planets therein ; which you muft doe by obferving in the Bphemeris, the exad place of the Planet in Signe and Degree at noone the day of the Figure* and in what Houfe you (hall finde the Sign wherein the Planet is, in that Houfe muft you place the Planet, within the Houfe if the Planet be in more Degrees then the Gufpe of the Houfe* without the Houfe,if his Degrees be lefle then thofe of theCufp of the Houfes.

Over againft the fixt day of January aforefaid, I finde T? to be in 27. 58. of T : I look for T in the Figure, but find it not ;

I find X on the Gufpe of the eleventh, and \S on the Cuff e of the twelfth Houle fo I conclude that the Signe T is inter¬ cepted j for fo we fay when a Signe is not upon any of the Cufpes of Houles, but is included betwixt one Houle and ano* ther ; I therefore place T? in the 1 1 Houfe, as you may fee.

In the next place I finde the place of X to be 27.40 JL . I find 25.31* H to be on the Cufpe of the fir ft Houfe, becaufe the De¬ grees adhering to % are greater then the Gufpe, I placed with¬ in the Houfe. Andbecaufe he is noted Retrograde I place the letter R,the better to informe my judgement.

’ In the fifth column of the Ephemeris I find the fixth of Jar mry to be in the 13. 55. r? ^which Signe in the Figure is the Gufp ofthe eighth Houfe : I therefore place as neer the Cufp

as I can,but his Degrees in the Signe being lefTe then the Cuipe of the Houle, I place him without the Houfe.

I finde the © the fixth day o (Ianuary to be in 26.3 9. vp whem I place beyond the Cuipe of the eighth Houle, becaule tile Degrees of the ©ini? are more then the Cuipe of the Houle.

In the fame line, and over again ft the lixt of Ianuary , 1 finde 9 to be in 10. Degrees, and 5 3 minuts of X .

I finde the Signe of X on the Cuipe of the eleventh Houle, and there I put 9 in the tenth Houfe, neer the Cufpe of the ele¬ venth Houfe, but not in the Houfe, becaule the Degrees of the Signe Ihe is in, are not equivalent to the Degrees of the Cufpe of the eleventh Houfe, but are fhort of them.

In the eight Column I finde under the Cara&er of 9 13.18. above it ^ . I therefore place 9 neer the Cuipe of the tenth Houle, but not in the Houle ; for you may lee he is neerer in Degrees to the Cufpe of the tenth Houfe then the ninth ; for by how much neerer he is in Degrees to the Cufpe of any Houfe, having the fame Signe, by fo much the neerer he ought to be placed to the Cuipe of that Houle.

In the ninth Column, under the Column of the 3) I finde over againft the lixth of Ianuary 20.54. aiK* over the Figures V? : fo then I place the 3) very neer the © in the eighth Houfe, and betwixt the Cuipe of the Houle and the © $ for you may fee the 3) hath not fo many Degrees as may put her beyond the © 3 nor hath Ihe fo few to be without the eighth Houle. How to reduce the motion of the 3) and other Planets to any home of the day,you fhall be inftrufted hereafter.

In the tenth column I find over againft my faid day, 1 1. 10. over it 51 and £1: fo you fee the £1 is in n.deg. 10. min. of 51 ; which I place in the middle of the third houfe, becaule ten degrees are very neare as nigh the Cufp of the third houle as fourth 5 the ^ being alwayes in the oppolite Signe and degree to the Q, , I place in the ninth houle, viz* in 1 1 degrees 1 o mi¬ nutes of ss 5 This beingdone, I muft obferve how the 3) Ope¬ rates and applies the fame day 3 I find the lixt o (Iannary on the right-hand page of the Book, that the 3) did laft feperate from a o' of d* ind now is applying to a cf of © at 11 48, that is, at eleven of clook and 48 minutes after at night, then to a o

WE have feldome occafion to ere& a Scheame of Heaven juft at noon, to which time the motions of the Planets are exa&ly calculated, and need not any rectification $ but u fin¬ ally all Queftions are made either fome hours before, or after noon 5 therfore it is needfull you know how to take their diur- nall or daily motion, or how many degrees or min. they move in 24 hours, that thereby you may have a proportion to adde to the place of your Planets according to the hour of the day or night when you fet your Figure : And although in horary Queftions, it occafioneth no error (except in the motion of the 2)) yet I thought fit to inftru^ the Learqer herewith, that fo he may know how to doe his work handfomely. The Longitude of a Planet is his diftance from the beginning of Aries , numbred according to the fucceflion of Signes, unto the place of the Planet.

Latitude is the diftance of a Planet from the Ecliptick,either

towards the North or South, by which means we come to fay, a Planet hath either Septentrionall or Meridionall Latitude, when either he recedes from the Ecliptick towards the North

or South.

Onely the Sun continually moveth in the Ecliptick, and ne¬ ver hath any latitude.

Declination of a Planet is his diftance from the ./Equator, and as he declines from thence either Northward or South¬ ward, To is his declination nominated either North or South.

Chap. VI I. ,

Of the twelve Houfes 5 their Nature and fignifi cation.

' S before we have faid there are twelve Signes, and alia teZ^Xtwelve Houles of Heaven, fo now we are come to relate the nature of thefe twelve Houles $ the exa& knowledge where¬ of is lo requifite, that he who (hall learne the nature, of the Planets and Signes without exa&: judgment of the Houfes, is like an improvident man, that furnifheth himfelfe with variety ol HoLifholdftuffe, having no place wherein to beftow them.

There is nothing appertaining to the life of man in this worlds which in one way or other hath not relation to one of the twelve Houfes of Heaven , and as the twelve Signes are ap¬ propriate to the particular members of mans body * fo allb doe the twelve houfes reprefent not onely the feverall parts of man, but his a&ions, quality of life and livings and the curiofity and judgment of our Fore-fathers in Aftrology, was fuch, as they have alotted to every houfe a particular iignification5 and fa diftinguifhccl humane accidents throughout the whole twelve houfes, as he that uuderftands the Queftions appertaining to each of them,{hal not want fufficient grounds wheron to judge or give a rationall anfwer upon any contingent accident, and fuccefle thereof.

Of the fir fl Houfe and its fignifi cation.

The fir d houfe, which containeth all that part of Heaven' &otn the line where the figure one ftandeth, until! the figure-two, where the fecond houfe bcginneth. >

It hath fignification of the life of man, of the ftature, colour, complexion* forme and fhape of him that propounds the Que-dion, or is borne } in Eclipfes and great Con junctions, and sipon the © his annuall ingreffe into T $ it fignifieth the Com¬mon people, or generall State of that Kingdome where the Fi~gure is ere&ed.

And as it is the firfl houfe, it reprefents the head and face of man, fo that if either T? or ^3 be in this houfe, cither at the time of a Q^iedion, or at the time of birth, you (hall obferve

fome

fome blemilh in the face, or in that member appropriate to the Signe that then is upon the culp of the houle ; as if T be in the Afcendant, the mark, mole, or fcarre is without fade in the head or face * and if few degrees of the Signe afeend, the mark is in the upper part of the head ; if the middle of the Sign be on the cufp, the mole, mark or fear is in the middle of the face,or neeritj if the later degrees afeend, the face is blemifhed neec the chin,towards the neck : This I have found true in hundreds of examples.

Of colours, it hath the White ; that is, if a Planet be in^ this houfe that hath fignification of white, the complexion of the Party is more pale, white or wan j or if you enquii e after the colour of the cloaths of any man, if his fignificatcr be ill the firft houfe, and in a Signe correfponding, the parties appa¬rel! is white or gray, or fomewhat neer that colour, fo alio if the Qjefiion be for Cattle, when their Significators are found in this houfe, it denotes them to be of that colour or neer it :

The houfe is Mafculine,

The Confignificators of this houfe are T and T? ; for as this houfe is the firft houfe, fo is T the firft Signe, and h the firft o:

that being in d with the good he is good, and in o' with the
evill Planets they account him evill.

The Tayle of the Dragon is Feminine by nature,and cleane TbeTaile «
contrary to the Head ; for he is evil! when joined with good
Planets, and good when in conjunction with the malignant
Planets. This is the conftant opinion of all the Ancients, but
upon what reafon grounded I know not ; I ever found the &
equivalent to either of the Fortunes, and when joyned .with
the evill Planets to leffen their malevolent fignification j when
joyned with the good to inercafe the good promifed by them :

For the Tayle of the Dragon, I alwayes in my praftifie found
when he was joyned with the evill Planets ; their malice or the
evill intended thereby was doubled and trebled, or extreamly
augmented, &c.and when he chanced to be in conjun&ionwith
any of the Fortunes who were lignificators in the queftion,
though the matter by the principall fignificator was fairely
promifed, and likely to be perfected in a fmall time ; yet did
there ever fal out many rubs and difiurbances,mudi wrangling

Every one of thefe Signes containes thirty degrees or parts in longitude : Hence it comes to pafle that the whole ^odiack doth confift of 360 degree every degree containes Commutes, which we alfo call fcruples,every minute containes do feconds, and fo further if you pleafe, &c. but in Aftrology we onely make ufc of degrees, minutes and feconds.

Thefe Signes are againe divided many wayes 5 as firft, into

four Quadrants or quarters, anfwcring to the four quarters of the yeare.

The Vernal! or Spring quarter, is fanguine,Hot and Moyft, and containes the firft three Signes, viz . Y T •

The iEftival or Summer quarter is Hot, Dry and Cholericky and containes the fourth, fifth and fixth Signes, viz. S Si n£ .

The Autumnal or Harveft quarter is Cold, Dry and Melan- cholly,andcontains the feventh, eighth and ninth Signes, viz* tej m s

The Hyemnal, Brumal or Winter quarter is Cold, Moyft and Phlegmatique, and contains the tenth,eleventh^nd twelft

Signes, viz. v? ,

They are againe divided in divifion of the Elements* for fome Signes in nature are Fiery, Hot and Dry, viz. T SI atid thefe three Signes conftitute the Fiery Triflicity.

Others are Dry, Cold and Earthly, viz* ^ > and make

The life whereofis this,That if you have a Mafeuline Planet in a Mafeuline Signe, it imports him or her more manlyjand fo if a Mafeuline Planet be in a Feminines Signe, the man or wo¬ man is lefle couragious, &c.

Some Signes againe are called Boreal, Septentrional or Northerne, becaufe they decline from the Equino&ial North¬ ward, and thefe are V H S 51 HE ∗, and theie fix Signes con- taine halfe the Zodiack, or the firfi femi -circle thereof.

Some Signes are called Auftral, Meridional or Southerne, . for that they decline Southward from the Equino&ial, and theie are £i HI ^ v? zz K •

Moveable. The Signes againe are divided into Moveable, Fixed and Common, T S ^ rp are called moveable and Cardinall: moveable, becaufe when the ® enters into T and & , the Wea¬ ther and Seafon of the yeer quickly varies and changes ; they are called Cardinal, becaufe when the © enters into any of thofe Signes from that time we denominate the Quarters of the yeer.

For from the ® entring into Tand tea the Equino&ial or the Spring and Autumne arife ; from the © his entrance into S and v? arifeth the Solftice of Summer and Winter.

So then the Equino&ial Signes are V ~ •

Solftitial and Tropicks s v?.

Fixed Signs, The Fixed Signes doe in order follow the Equino&ial and Tropicks y and they are called fixed, for that when © enters into them, the feafon of the yeer is fixed, and we doe more evidently perceive either Heat or Cold, Moyfture or Drinefle.

The fixed Signes are thefe, : & SI HI ^ •

Common • Signes are conftituted between moveable and fixed, and re-

IF one demand of the drtift, of what condition, quality or
ftature the perfon queftted, or enquired of is, then obferve
the Signe of that houfe whereby he is fignified, the Signe
wherein the Lord of that houfe is, and wherein the Moone is,
mix one with another, and by the greater teftimonies judge;

for if the Signe be humane, aierhl,that afeends or defends, and the Lord of that Signe or the l in any Sign of the fame tripli- dty oy nature, you may judge the Body to be handfome, and the conditions of the party to bz fociable, or he very courte¬ ous, 8tc.

If the Quere be concerning a Difeafe, and r be either on the cufp of the Afcendant, or defending in the fixt, you may judge he hath fomething in his Difeafe of the nature of r , but what It is, you muft know by the concurrence of the other fig-

niheators.

If a Country manor Citizen hath loft or miifeth any Cat¬ tle, or any materiall thing in his houfe,3et him obferve in what Signe the Significator of the thing is in ; if in y , and it be"a Beaft ftrayed, or the like, let him fee what manner of places that Signe directs unto, and let him repaire thither to fearch, coniidering the quarter of heaven the Signe fignifies : if it be an unmoveable piece of Goods, that without man or woman cannot be removed, then let him look into fuch parts of his houfe, or about his houfe as T iignifies.

If one aske concerningTravell, whether fuch a Country, City or Kingdome will be healthfull or profperous unto him, yea or no ; fee in the Figure in what Signe - he Lord of the Af¬ cendant is in, if the fignificator be fortunate in V , or if % or 2 be therein, he may fafely travell or fojourne in fuch Cities or Countries as the Signe of r reprefents, which you may ejfi- ly difeerne in the abovenamed Catalogue : Tiiofe Countries to the Signe wherein the Infortunes are pofited, unldfe

Pelves be fignificators, are ever unfortunate : where remember, that a Gentleman enquires ufually, if he fhall have his health and live jocundly in fuch or fuch a Country or City ; the Mer¬ chant he wholly aimes at Trade, and the encreafe of his Stock, therefore in the Merchants Figure you muft confider the Country or City fubjeft to the Signe of the fecond houfe, or where the Part of Fortune is,orLord of the fecond is,and which

is mo ft fortified, and thither let him Trade.

Chap. XVIII.

Of the EJfentiall Dignities of the Planets »

THe exa& way of judicature in Aftrology is, firft, by being perfeft in the nature of the Planets and Signes.

Secondly, by knowing the ftrength, fortitude or debility of the Planets,Significators,and a well poyiing of them and their alpe&s and feverall mixtures, in your judgment.

Thirdly, by rightly applying the influence of the poiiture of Heaven ere&ed, and the Planets alpe&s to one another at the time of the Queftion, according to natural! (and not enforced) maximes of Art ; for by how much you endeavour to ftraine a judgment beyond nature, by to much the more you augment your Errour.

A Planet is then faid to be really ftrong tvhen he hath many Eflential dignities, which are knownc, by his being either in his Houfe5ExaItation,Triplicuy,Terme or Face,at time of ere¬ cting the Figure. As for Example :

In any Scheame of H aven, if you find a Planet in any of Ejfential di thofe Signes we call his houfe or houfes, he is then eflentially nity b ftrong, and we allow for that five dignities 5 as 1? in \? , % in v? , &c*

In judgment^ when a Planet or Signific'ator is in his owns houfe, it reprefencs a mm in fuch a condition, as that he is Lord ot hi*, o vne houle, eft ate and fortune ; or a man wanting very little of 'the Goods >f th s world, or it tels you the man is in a very happy ftate or conditi on : this will be true,unlefle the

fignificator be retrograde, or combuft, or aftli&ed by any other malevolent Planet or afpeft.

If he be in that Sigue wherein he is exalted, you may allow him four dignities eilentiall, whether he be neer the very degree of his exaltation, yea or not ; asef inyp or V in <s .

If the fignificator be in his exaltation, and nowayesimpedited, but Angular ; it prefents a per foil of haughty condition, arrogant, affuming more unto him then his due j for it's obferved, the Planets in fome part of the Zodiack doe more evidently declare their effe&s then in others ; and I conceive this to be in thofe Signes and degrees where fixed Starres of the fame nature with the Planet, are more in number, and neerer the Ecliptick.

If he be in any of thole Signes which are alotted him for his Triplicity, he hath allowed him three dignities : but herein you muft be cautious ; as for example : In a Queftion, Nativity, or the like, if you find the ® in T , and the Queftion, or Nativity, or Scheame ere&ed be by night, and you would examine the ® his fortitudes, he fhall have four dignities for being in his exaltation, which continues through theSignej but he fhall not be allowed any dignity, as being in his triplicity 5 for by night the ® ruleth not the fiery Triplicity, but % ; who had he been in place of the ®, and by night, muft have had allowed him three dignities: and this doe generally in all the Planets, d* excepted, who night and day ruleth the watry Triplicity.

A Planet in his triplicity, fhewes a man modeftly indued with the Goods and Fortune of this world, one prettily descended, and the condition of his life at prefent time of the Queftion, to be good 5 but not fo, as if in either of the two former

dignities.

If any Planet be in thofe degrees we aftigne for his Termes, we allow him two dignities •, as whether day or night, if X be in one, two, three or four. See. degrees of T , he is then in his owne Termes, and muft have two dignities therefore 5 and fo $ in any of the firft eight degrees of , 8cc.

A Planet fortified, only as being in his own Termes, rather jfliewes a man more of the corporature and temper of the Pla-
- > T net,

net, then any extraordinary abundance in fortune, or of emi-nency in the Common-wealth.

If any Planet be in his Decanate^ Vecurie or Face , as in Face, the fir ft ten degrees of T , or 5 in the»firft ten degrees of b, he is then allowed one effentiall dignity ; for being in his owne Decanate or Face, cannot then be called peregrine.

A Planet having little or no dignity, but by being in his Se¬nate or Face , is almoft like a man ready to be turned out of doores, having much adoe to maintaine himfelfe in credit and reputation: and in Genealogies 'it reprefents a Family at the laft gafp, even as good as quite decayed, hardly able to fupport

it felfe.

The Planets may be ftrong another manner of way, viz. Ac¬cidentally ; as when Direft, fwift in Motion, Angular, in A or ^ afpe& with % ov 9 , See. or in d with certaine notable fixed Stars, as {Kail hereafter be related j Here followeth a Ta¬ble of Effentiall Dignites, by which onely calling your Eye thereon, you may perceive what effentiall dignity or imbecility

any Planet hath. -

There hath been much difference between the Arabians ,

Greeks and Indians concerning the Effentiall Dignities of the Pla¬ nets ; I meatie how to difpofe the feverall degrees of the Signes fitly to every Vianet $ after many Ages had paffd, and until! the time of Ftolotney, the Atfrologians were not well refolved hereof % but fince FtoJomey his time, the Grecians unanimoufly followed the method he left, and which ever fince the other Chriftians of Europe to this day retaine as mo ft rationall ; but the Moores of Barbary at prefent and thofe Attrologians of their Nation who* lived in Sfaine doe fomewhat at this day vary from us * howe¬ ver I prefent thee with a Table according to Ftolomey •

5 five : here 5 applies to d ofc? •

Secondly, when both Planets are retrograde, as 5 in ten de¬ grees of T , and cT i:« nine of Ti 5 being not direft untill he hath made d with d : this is an ill Application and an argu¬ ment either fuddenly perfecting, or breaking off the bufineffe, according as the two Planets have fignification.

Thirdly, wheti a Planet is dirett, and in fewer degrees, and a retrograde Planet being in more degrees of the Signe, as d being direCt in 15 T : and 2 retrograde in 17 T 5 this is an ill application, and in the Ay re fhewes great change ; in a Quefti- on fudden alteration : but more particularly I exprefle Appli - cation as followeth«

Application, It is when two Planets' are dawring neere together either by

or Afpeft, viz. to a ^ A D or eP 5 where you muftunder- ftand, that the fupcriour Planets doe not apply to the inferi-

our (unleiTe they be Retrograde, but ever the lighter to the more ponderous ; as if T? be in the i o. degree of T 3 and & be in the feventh degree of T the fame Sigrie, here <? being in fewer degrees, and a more light Planet then T? , applies to his cf 5 if cT had been in the feventh degree of H 5 he had then ap- plyed to a Afpeft with V: had been in the feventh de¬ gree of S 5 he had then applyed to a □ of T? ; had he betn in the feventh of SI , he had applyed to a A of T? s had cf been in the feventh degree of ^ , he had applied to an cP of T? , and the trueAfpeft would have been when he had come to the fame degree and minute wherein 1? was : And you muft know that when T? is in T arid cafteth his ^ □ or A to any Planet in the likedegrees of H or 25 or SI y this A(pe& is called a Sini- fter>K □ or A , and it is an Afpett according to the fucceflion of theSignes ; for after T fucceeds tf,then E 5then S,&c.and fo in order. Thefe are called Signes inconjunft, or fiich as if a Planes be in one of them, he cannot have any afpeft to another in tht figne underneath 2 as one in T can have no afpeft to another iiv or tr , or one in 15 to one in Y H *3 orV 3 fo under- ftand of the reft. - ♦

Separation*

Prohibition*

1 1 o An Introduction to Astrologies

Separation, it is in the firft place, when two Planets are de¬ parted but fix minutes diftancc from each other, a* let h be in io. dear, and 25. of T and V in 10. degr. and 25.min.of T : now in thefe degrees and minutes they are in perfeft d > but when. V Bull get into 10. degr. and 3 1. or 32. minutes of J, he ihall be faid to be feparadng front hi yet becaufe h hath 0. degr. allowed hint for his rayes, and hath alfo the fame number allowed him, % cannot be faid to be totally feperated cr cleere from the rayes of h , untill he hath got 9.whole de¬ uces further inro T , or is fully 9. degrees dillant from him, for the halfe of V hisorbeis 4. degr. 30.min.and thehalfeof t, his orbe is 4. degr. 30. min. added together they make 9. whole degrees j for every Planet that applies is al lowed halfe his owne orbs and halfe the orbs of that Planet from whom I he feperates : As if ® and }' be in any afpifijthe 5 (hall then I be feperated from the © , when (he is fully dliiant from the ® |

7.degr.and 30.min.mz. half the orbs of the ® , and 6. degr. the moity of her owne orbes ; in all _i 3. degr. and 30.minutes.]

The exatt knowledge hereof is various and excellent : For

admit two Planets fignifkators in Marriage at the time of the queftion, are lately feperated but a few minutes ; I would then nidge there had been but few dayes before great probability of effefting the Marriage, but now it hung in fufpence, and there feemed fome diflike or rupture in it ; and as the fignificators i doe more feperate, fo will the matter and affeftion of the par¬ ties more alienate and vary, and according to the number of deprees that the fwifter Planet wanteth ere he can be wholly feperated from the more ponderous, fo will it be fo many wcekes, dayes,moneths,or yeers ere the two Lovers will who!- | Iy delifi or fee the matter quite broke off: The two figiupcd- un inmoveable Signes, Angular and fwift in motion, doth hailen the times Tin common fignes, the time will be more long ; in fixed, a longer (pace of time will be required.

Prohibition is when two Planets that iignifie the effecting or bringing to conclufion any thing demanded5are applying to an Afped \\ and before they can come to a true Afpeft/another

Planet interpofeth either his body or afpe&5 fo that thereby

the matter propounded is hindered and retarded 5 this is cal-

led Prohibition. For Example, d is in 7-degr.of r , and h .

is in the 12. d fignifies the effe&ing my bufinefle when, he comes to the body of Tj , who promises the conclufion, the © iTSefametimein6. degr.oVr: Now in regard that the ®is fwifter in motion then & , he will overtake d* , and come to d with h before d 9 whereby whatever d or h did for¬ merly fignifie,i$ now prohibited by the ® his iirft impediting

6 and then h , before they can come to a true d . This man¬ ner of prohibition is called a Con Jimftion all or Bodily .pro¬ hibition * and you muft know that the combuftioii of any 1 la- net is the greateft misfortune that can be.

The fecond manner of Prohibition is by Afpeft, eithei ^

O A c P , viz. when two Planets are going to Conjunction* as d in 7. degr. of T , h in 1 5 of T * let us admit the 0 m 5.

degr. of H * he then being more fwift then d m his diurnal I motion, doth quickly over-take and pads by the dexter o 'Jand comes before d can come to d) to a ^ dexter ot T? .

This is called a Prohibition by Aipeft,in the fame nature judge if the AfpeCt be □ A cP . ■

There's another manner of Prohibition * by Tome more pro-

perly called Reffenation * as thus, T? in i2.degr. of T 5 d in

7 .degr. here d haftens to a d of h , buc before he comes to the tenth or eleventh degree of T he becomes Retrograde, an by that meanes refraines to come to a d of 1? ,who ftill moves forward in the Signe, nothing fignified by the former o' will

ever be effe&ed. r , .

TranfLtion oflight and nature is, when a light Planet le- franp.auon,

perates from a more weighty one, and prefently joynes to an¬ other more heavy ; and its in this manner. Let TJ be m 20. dear, of T : d ini5.of T,and 5 ini6.ofTi here 3 be¬ ing a fwift Planet feperates from d , and tranflates the vercue of d unto h. Its done alfoas well by any Afpett as by d .

And the meaning hereof in judgenient, is no more then thus 5 That if a matter or thing were promifed by b > then iuch a man as is fignified by 3 (hall procure all the atMance a Mars man can doe unto Saturne, whereby the bufineffe maybe the better effefted ; in Marriages, La wfuin,and indeed m aU vulgar q iellions Tranflation,is of great ufe,aad ought well to be con- Mered. * Recepaon •

Peregrine∗

Reception is when two Planets that are fignificators in any Qjieftion or matter, are in each others dignity 5 as © in V ∗ and cf in SI 5 here is reception of thefe two Planets by Hou¬ les j and certainly this is the ftrongeft and belt of all recepti¬ ons. It may be by triplicity terme or face,or any effentiall digJ nity 5 as 9 in Y , and ® in 5 here is reception bytiiplici- ty, if the Queftion or Nativity be by day : fo 9 in the 24. of y∗and d" in the 1 6∗ of H 5 here is reception by terme∗ cf being

in the terms of 9 ,and (he in his termes.

The ufe of this is much ∗ for many times when as the effect¬ ing of a matter is denyed by the APpe&s, or when the fignifi- cators have no Alpeft to each other, or when it feemes very doubtfull what its promiled by □ or cP of the fignificators∗ yet if mutuall Reception happen betwixt the principall figni¬ ficators, the thing is brought to pafle, and that without any great trouble, and fiiddenly to the content of both parties.

A Planet is then Paid to be Peregrine., when he is in the de¬ grees of any Signe wherein he hath no effentiall dignity : As T? in the tenth degree of V , that Signe being not his Houle∗ Exaltation∗ or of his Triplicity, or he having in that degree either Terme or Faces, he is then Paid to be Peregrine 5 had he been in 27, 28, &c. of T ∗ he could not be termed Peregrine∗ becaule then he is in his owne Terme.

So the © in any part of s is Peregrine, having no manner of dignity in that Signe.

This is very much materiall in all Qneftions to know the Peregrine Planet,iefpecially in queftions of Theft 5 for euer al- moft the fignificator of the Theefe is known by the Peregrine Planet pofited in an Angle, or the Pecond HouPe.

Vojd of cours A Planet is voyd of courfe,when he is Peperated from a P

net, nor doth forthwith, during his being in that Signe, ap¬ ply to any other : This is molt ufually in the 3) ; in judges ments doe you carefully oblerve whether {he be voyd of courle yea or no ; you (hall Peldome lee a bufinefle goe handfomely

forward when fhe is Po.

F ruff rat ion* F ruftration is, when a Pwift Planet would corporally j

with a more ponderous, but before they can come to cP * the more weighty Planet is/oyned to another, and fo the cP of

the

the firft is frti ft rated, as 5 in ten degrees of V , d twelve, V thirteen of V i here y ftrives to come to d with d , but d firft gets to d with ¥ > whereby y is fruftrated or the d ofcf :inQue- ftions it fignifies as much as our common Proverb, Two Voggef qmrrell, a third gets the Bone ,

Hayz is, when a Mafculine and Diurnal Planet is in the day Hayz. time above the earth, and in a Mafculine Signe, and fo whena Feminine, Nofturnal Planet in thenigHFif in a Feminine Sign and under the earth •* in Qneftions it ufually fhewes the content of th^ Querent at time of the Qieftion, when his ftgnificator i$ lb found. „

Saturne,Jupiter and Mars being placed above the Orbe of the £uper;or av^ Sunne, are called the fuperiour, ponderous and more weighty .faferj Planets ; Venus, Mercury and Luna are called the in'feriour Pia- miS nets, being under the Qrbe of the Su ine,

A Planet is laid to be Co nbuft of the ® , when in the fame ComhujHc Signe where, the ® is in, he is not diftant h orn the ® eight de¬ grees and thirty minutes, either b.fore or after the ® ; as 'if in the tenth degree of T , and ® in the eighteenth of T ; here Y is combuft : or let the ® be in eighteen of T , and 'if in twenty eight degrees of V , here "if is combuft and you mud obferve a Planet is more aftli&ed when the ® haftens to d of him, then when the ® recedes from him *, in regard ids the body of the ® that doth afflift. I allow the moyity of his owne Orbs to fhew the time of comhuftion, and not of "if v for by that rule % fhould not be combuft before he is within foU£ degrees and a half of the ® . I know many are again ft this opinion.

Life which you find moft verity in : the ftgnificator o£ the

Querent combuft, fhewes him or her in great feare, and over-
powred by fome great p f on.

A Planet is faid to be ltiil under the ^un-beames, until 1 he is 'Under
fully elongated ordiftant from his body I7,degr. either before beams*
or after him.

A Planet is in the heart of the Sunne,or in Cazimi,when he Cazimi, or i
is not removedfrom him 17.min.or is within 1 7. min. forward the hart of
or backward,as ® in 15.30. £ in 15,25.0! <d * here y is the ®«

in Cazimi, and all Authors doe hold a Planet in Cazimi to be
fortified thereby ; you mult obferve all Planets may be inCom-

h V and c? ,are Orientall of the © , from the time of their
c f with him, untill they ome to his c P* from whence untill
againe they come to d , they are faid to be Occidental! ; to be
Orientall is no other thing then to rile before the ® : to be
Occidental! is to be feen above the Horiron, or to fet after the ■-
© isdowne: 2 and 2 can make no G A or cP <0 the

© : their Orientality is when they are in fewer degrees of the Signe the © is, or in the Signe preceding 5 their Occidentali- ty, when they are in more degrees of the Signe the ® is in, or in the next fubfequent : for you muft know 2 cannot be more degrees removed from the © then 28. nor 9 more then 48. though fome allow a few more. The J) is Orientall of the © from the time of her <p to her conjun&ion, and Occi¬ dental! from the time of her Conjunction to Oppofition 5 and the reafon hereof is, becaufe {he farre exceeds the Sunne in fwiftnefife of motion,, and fo prefently gets further into the Signe, See.

Befieging is, when any Planet is placed betwixt the bodies of the two Malevolent Planets 7?: and v as Tj in 15. Vy ; cf in 10. of T , 2 in 13 V : here Venw is befieged by the two - in fortunes, and it represents in queftions, a Man going out of Gods bleiling into the warme Sunne \ I mean if 2 be a fignifi- catrix that time in the figure*

There are other accidents belonging to the Planets one a - mongfl: another mentioned by the Ancients, but of fo little purpole in judgement, that I have cleerly omitted them* •

When a Planet moveth forward in the Signe, as going out of 3 3«degr. into 14. and fo along*

W hen a Planet goeth backward, as out of 10c degr. into 9,

8,7, &c.

When he moves not at all, as the (upericurs doc not 2,3, or 4, dayes before Retrogradation. .

T hufeof the ‘Table •

Many times it happens, that it is of great concernment to the Querent to know, whether a Woman be with chiide of a Male or Female ; or whether the Theefe be Man or Woman, &c. When it fhall fo chance that neither the Angles, or the (ex of the Planet, or the Signes doe difcover it, but that the tefti-monies are equal! ; then if you confider the degrees of the Signe wherein the 2) is, and wherein the Planet fignificator of the thing or party quefked is, and the degree of the C ufpe of the Houfe fignifying the perfon quefked after 5 and fee by the fecond Colamn whether they be in Mafculine or Feminine Degrees,you may poyfe your judgement,by concluding a Maf¬culine party, if they be polked in Mafculine degrees ; or Fe¬minine, if they be in Feminine degrees. You fee the firft eight degrees of T are Mafculine,the ninth degree is Feminine,from

nine to fifteene is Mafculine, from fifteen to two and twenty is Feminine, from two and twenty to thirty is Mafculine; and fo as they (land diretted in all the Signes.

The third Columne tels you there are in every Signe certain* Degrees, fome called Light, Darke, Smoakie,Void, Etc. the ufe hereof is thus :

Let a Signs afeend in a Nativity or Qneftion, if the Afcen- dint be in thofe Degrees you fee are called Light, the Chiide or querent (hall be more faire ; if the degree afeending be of thofe we call Darke, his Complexion fhall be nothing fo faire, but more obfeure and darke ; and if he be borne deformed, the deformity fhall be more and greater ; but if he be deformed when the light degrees of a Signe afeend^the imperfettion fhall be more tolerable.

And if the or the Degree afeending be in thofe degrees - we call Voyd, be the Native or Querent faire or foule, his un- deritanding will be fm all, and his judgement lefle then the world fuppofeth, and the more thou conferred with him, the grener defe& fhalt thoirfindein him. If the Afcendant,the or either of them be in thofe degrees we call Smoakie, the per- fon inquiring or Native, , fhall neither be very faire nor very

foule ^ 3

foule, butofamixt Complexion, Stature or conation, be- twixt faire and foule* betwixt tail and of little Stature, and fo in condition neither very judicious or a very A fife.

You fee the three firft Degrees of T are Darke*from three to eight areligfit, from eight to fixteen are Darke* from lixteen. to twenty are Light* from twenty, to. four and twenty are Voyd, from foure and twenty to nine and twenty are Light, the 1 aft Degree is Voyd.

Degrees deep or pitted prefented in the fourth C olumn have 'Degrees?deef ^is ggnificat|0A) that-if either the ® or the Degree afeendi flttea* or Lord of the Afcendant be in any of them* it (hews the Man at a hand in the queftion he askes* not knowing which way to

turn himfelfe* and that he had need of helpe to bring him into a better condition 5 for as a man caft into a Ditch doth not eafil] get out without helpe, (o nomore can this querent in the cafe he is without aftiftance.

Called by [of ne Degrees lame and deficient are thofe mentioned in the

Azitnwe de- Columnc ; the meaning whereof is thus* If in any queftion grees* you finde h'm that demands the queftion * or in a Nativity* if

you finde the Native defe&ive in any member* or infefred with an inleperable difeafe* halting* blindnefte? deafnefle* &c. you may then luppofe the native hath either one of thefe Azimene degr. afeending at his birth* or the Lord of the Afcendant* or the D in one of them : in a Queftion or Nativity* if you lee the Q;ierent lame naturally* crooked* or viciated in fbme mem^ ber* and on the fodain you can in the figure give no prefent fatisfa&ion to your felfe, doe you then confider the Degree af¬ eending* or Degree wherein the J) is in* or the Loidof the Afcendant* or principal! Lord of the Nativity or Queftion, and there is no doubt but you lhall finde one or mpre of them in Azimcne degrees.

Decrees in - Theft Degrees are related in the fifth Column, and tend to

The Vfe and Reafon of the former Table.

j ' | ' ' ' ” « ' ‘ ; j *

IT was well neere foure yeeres after I had ftudied Allrology, ~
before I could tinde any reafon, why the Planets in every of
toeSignes ihould lignifie the members as mentioned in the Ta¬
ble : at laid, reading the 88. ApOorifme of Homes, I underftood
the meaning of it, viz. Erh im-pcdimentipn circa Warn partem corporis
quam jfgnificat Jignum,quodfuerit nativitatU tempore imped; turn. There
wil be feme impediment in or neer that part of the body,which
is tignihed by theSigne that fhall be afflicted at time of the Birth
The ufe of all comes to thus much : -

That if you would know wh|ere anyIDifeafe is, Imeanein
what member of the body, fee in what Signe the flgnicator of
the lick Party is, and what part of mans body that Planet fig-
nifies in that Signe, which you may doe by the former Table,
in that member or part of body fhall you fay the lick party is
grievedcor difeafed. 0 1 i iV- d c • j ,

As ife h be Signilicat0r*of the! fick party, and at time of your
• o j . v i - l k Q,ieftion

Queftion in H * have recourfe to your Table, and you fee h in
E iiguifieth aDjfeafe in the Belly or heart,8tc.Do fo in the reft.

Now the reafon of this fignification of every Planet in fiich
or fuch a Signe is this :

Every Planet in his owne Houle or Signe, governeth the .
Head 5 in the fecond Signe from his Houfe, the Neck 5 in the
the third Signe from his Houle, the Armes and Shoulders ;
and fo fucceflively through the twelve Signes : as T? in vp ruleth
the Head, in ss the Neck, in X Armes and Shoulders : fo ^ in
& ruleth the Head, in vy the Neck, in ss the Armes and
Shoulders.

The 3> obferves the fame order as the reft yet the Arabians ,
from whom this learning is, doe allow her in T the Head a$
well as the Knees : The Head, becaufe Aries fignifies fo much *5

The Knees ,becaufe^rie/ is the ninth Sign from Cancer .

You may obferve this in the marks of mans Body, and ma¬ ny other judgments, and make lingular ufe of it ; ever remem- bring this, the more the Signe is vitiated, the greater mole or fcarre 5 or the neerer to an Azimene , Fitted or deficient degree of the Signe, the ftronger is the deformity, ficknelfe, &c.

Considerations before Judgment .

r A kk the Ancient? that have wrote of Queftions, doe give jfjLwarning to the Aflrologer , that before he deliver judgment he well conlider whether the Figure is radical! and capable of judgment ; the Queftion then (hall be taken for radicall, or fit to be judged, when as the Lord of the hour at the time of propoling the Queftion, and erefting the Figure, and the Lord of the Alcendant or firft Houfe,are of oneTriplicity,or be one, or of the fame nature.

As for example $ let the Lord of the houre be cf , let the Signe of TTf orX afeend, this Queftion is then radicall, becaufe d" is Lord of the hour, and of the Watry Triplicity, or of thofe

Signes s HI or X. ~

Againe, let the Lord of the hour be d" , and T afeend, the Queftion fhall be radicall, becaufe c? is both Lord of the hour and Signe afeending. ^

12 2 An latroduBion to ASirologie

Let the Lord of the hour be d" 5 and let the Signe SI afcend, here, although the © is one of the Lords of the fiery Triplici- ty, and foie Lord of the Signe SI,, yet ftiall the Queftion be judged j becaufe the © , who is Lord of the Af Cendant, and cf who is Lord of the hour, are both of one nature, viz. Hot and Dry.

When either oo. degrees, or the firfi or fecond degrees of a Signe afcend (efpecially in Signes of fhort afcentions, viz. v? xz K V b' H, you may not adventure judgment, unlefle the Querent be very young, and his corporature, complexion and moles or fcarres of his body agree with the quality of the Signe

afcendirtg. .-v

If 27, 28, or 2^ degrees afcend of any Signe, it*s no wayes fafeto give judgment, except the Qjierent be in yeers corref- ponding to the number of degrees amending ; or unlefle the Figure be let upon a time certaine, viz ♦ a man went away or fled at fuch a time precife j here you may judge, becaufe it's no propounded queftion, •

l€$ not fafe to judge when the 2> is in the later degrees of Signe, efpecially in H M or vy.5 or as fome fay, when (he is m ViartCQmbuffd> which is, when (he is in the laft 15 degrees of & , or the firft fifteen degrees of nt .

All manner of matters goe hardly on (except the principal! fey ificators be very ftrong) when the 3> is voyd of courfe ; yet iomewhatftie performesif voydof courfe, and be either in b 2? x71 or K t

You mu ft alfo be wary, when in any queftion propounded you find the Gulp of the feventh houfe affixed, or the Lord of that houfe Retrograde or impedited, and the? matter at that not concerning the feventh houfe, but belonging to any other houfe, it's an argument the judgment of theAftrologer will give fmall content, or any thing pleafe the Querent 5 for the feventh houfe generally hath fignification of the Artift .

The Arabians s as Alkindus and others, doe deliver thefe fol¬ lowing rules, as very fit to be confidered before a Queftion be judged. r ' ' ' '■ : . ' . Y

Viz . if T? be in the Afcendarit,efpeciallyRetrograde,the mat* ter of that Queftion feldome or never comes to good.

, b Ifl

I2 In the feventh either corrupts the judgement of t lie Atfro- legery or is a Signe the matter propounded will come from one misfortune to another*

If the Lord of the Afcendant be ComBuft, neither queftion

propounded will take, or the Querent be regulated.

The Lord of the feventh unfortunate, or in his fall, or Termes of the Infortunes, the Art iji fliall fcarce .give a folid judgment.

When the teftimonies of fortunes and lnfortunes are equal, deferre judgment, it's not poftlble to know which way the Ba¬ lance will turne : however, deferre you your opinion till ano¬ ther queftion better informe you.

right underftanding what is ufefull for him, and moft fit to be knowne. .

In every queftion we doe give the 3> as a Cofignificator with the querent or Lord of the AYcendant (fbme have alfo allowed the Planet from whom the j feparated as a fignificator 5 which I no

In like manner they Joyned in judgment the Planet to whom the J> apply ed at time of the queftion, as Cofignificator with the Lord of the houfe of the thing quefited, or thing demanded.

or the thing demanded fhall be accomplifhed yea or nof.

Firft, by Conjunction when as therefore you find the Lord of cinjunSioru the Afcendant,and Lord of that honfe which fignifies the thing demanded, haftening to a d , and in the firft ho life, or in any Angle, and the ffgnifoaters meet with no prohibition or rcfrena - t forty before they come to perfeft d ; you may then judge, that the thing fought after, (hall be brougnt to paffe without any manner of let or impediment, the foOner, if the Significators be fwift in motion, and Effentially or Accidentally ftrong; but if this d of the Significators be in a Succcdant houfe, it will be perfe ied, bat not fo fo on: if in Cadent houfes, with infinite Ioffe of time, fome difficulty, and much ftrugling. ■

Things are alfo brought to a paffe, when as the principal! ^

fignifiers apply by ^ or A afpeft out of good Houfes and pla- or ^ * ccs where they are eflentially well dignified (and meet with no malevolent Afpeft to intervene ere they come to be in per- fe& ^ or a ; I meaneto thepardll Sextill or Tryne.

Things are alfo produced to perfe&ion, when the Signifi- ^

cators apply by □ afpeft, provided each Planet have dignity ar^ <P • in the Degrees wherein they arc, and apply out of proper and good Houfes, otherwife not. Sometimes it happens, that a matter is brought to paffe when the Significators have apply- ed by c P , but it hath been, when there hath been mutual 1 re*

ception by Houfe, and out offriendly Houfes, and the }) fepe-
rating from the Significator of the thing demanded, and ap¬
plying prefently to the Lord of the Afeendant, I have rarely
(een any thing brought to perfe£tibn by this way of oppoliti-
on ; but the Querent had been better the thing had been un¬
done : for if the Q^ieftion was concerning Marriage, the par¬
ties feldome agreed,but were ever wrangling and jangling, each 5
party repining at hite evil! choyce,laying the blame upon their
covetous Parents, as having no minde to it themfelves : and if
the QJjefiion was aboutTortion or Monies, the querent did
its true, recover his Money or Portion promifed, but it coft
him more to procure it in fuit of Law, then the debt was
worth, &c. and fo have I feen it happen in many other
things, See.

Things are brought to perfection by Transition of Light Tranflation*'
rnatd Nainre, in this manner* ' When

When the Significator* both of Querent and Quefited are fe pa-
rated from d or ^ or A afpeCts of each other, and fome one
Planet or other doth feparate himfelfe from one of the Signifi -
cators, of whom he is received either by Houfe, Triplicityor
Terme, and then this Planet doth apply to the other Signified. -
tor by d or afpeCt, before he meeteth with the cf orafpeCfc of
any other Planet, he then tran dates the force, influence and
vertue of the firft Significator to the other, and then this inter¬
vening Planet (or fuch a man or woman as is fignified by that
Planet) fhall bring the matter in hand to perfection.

Confider what houfe the Planet interpofing or tranflating
the nature and light of the two Planets is Lord of, and deferibe
him or her, and fay to the party, that fuch a party fhall doe
good in the bufinefie of, &c. viz . if Lord of the fecond, a good
Purfe effeCts the matter j if Lord of the third, aKinfmanor
Neighbour ; and fo of all the reft of the Houfes: of which more
fhall be faid in the following Judgments.

Matters are alfo brought to perfection, when as the two
principall Significators doe not behold one another, but both
caft their feverallAfpeCts to a more weighty Planet then them-*
felves, and they both receive him in fome of their effentiall
dignities ; then fhall that Planet who thus collects both their
Lights, bring the thing demanded to perfection : which fig-

nifies no more in Art then this, that a Perfon fomewhat inte¬ reffed in both parties and deferibed and fignified by that Pla¬ net, fhall perfornie, effeCt and conclude the thing which other* wayes could not be perfected : As many times you fee two fall at variance, and of themfelves cannot think of any way ofao* commodation, when fuddenly a Neighbour or friend acciden¬ tally reconciles all differences, to the content of both parties : And this is called ColleHion •

Laftly, things are fometimes perfected by the dwelling of Planets in houfes,z>i&.when the Significator of the thing deman¬ ded is, cafpally pofited in the Afcendant; as if one demand if he fhall obtaine fuch a Place or Dignity, if then the Lord of the tenth be placed in the Afcendant, he fhall obtaine the Benefit, Office, Place or Honour defired ; This rule of the An¬ cients holds not true, or is confentanious to reafon: except

' 7. • . .

they will admit, that when the 1 , befides this dwelling in houfe, doth transferre the light of the Signified or of the thing defired, to the Lord of the Afeendant ; for it was well cbferved that the applictaion of the Sigmficators (hew inclination of the parties, but reparation ufually privation ; that is, in more plaine termes, when you fee the principall Significators of the . Querent, and thing or party qnefited after feperated, there's then little hopes of the effeftingor perfe&ing what is deilred, ('not¬ withftanding this dwelling in houfesj but if there be applica¬ tion the parties feeme willing, and the matter is y et kept on foot, and there is great probability of perfetting it, or that

things will come to a further treaty.

In all Queftions you are generally to obferve this Method

Secondly, having confidered the Lord of the Afcendant, fee how many degrees the is alfo diiiant from any Infortune, or from the Lords of the fixth or eighth, and in what Signe or Signes, their Nature, Quality and Houle wherein they are politcd.

Thirdly, confider if there bean Infortune in the Afcendant, how many degrees the Cufp of the houfe wants of that degree the unfortunate Planet is in, or if the unfortnnUting Planet be in the feventh, how many degrees the Afcendant wants of his true Opposition, and compute the time of Death, SicknelTe or

Misfortune- according to the dimenfipn of degrees in Signes moveable, common, or fixed.

If you find the Lord of the Afcendant affli&ed mod of all by the Lord of the fixt, and in the fixt, or if the Lord of the A f- emdant'come to Combuftion in the fixt, you may judge the Querent will have very many and tedious ficknefies, which will fcarce leave him till his death ; and the more certain your judg¬ ment will be, if the Lord of t he Afcendant, and Lord of the eighth and the D be all placed in the fixth.

There are many other Parts which the Arabians have menti¬

them out, and what they faid, they did fignifie : fometimes the

TH E Aj Cendant and his Lord are for the Querent , the feventh
houfe and his Lord for him you would fpeak withall ;
this is underftood, if you goe to fpeak with one you familiarly
deale withall, or are much converfant with* and is not allied

you muft take the Lord of the fourth 5 if with the Mother,
the Lord of the tenth; if the Father would fpeak with his
Child, the Lord of the fifth, and fo in the reft ; vary your rule
and it ferves for all.

If the Lord of the feventh houfe be in any of the four Angles,
you may conclude the party is at home with whom you would
fpeak with 5 but if the Lord of the feventh, or Lord of that
houfe from whom Judgment is required, be in any Succedant
houfe, viz, the eleventh, lecond, fifth or eighth, then he is not
far from home j but if his Si^nificator be in a Cadent houfe, then
he is far from home.

1 have many times admired at the verity hereof, and it hath

been one maine argument of my engaging fo farre in all the parts of Aftrology, for very rarely you (hall find theft rules ' faile. I

When you have upon any demand erefted the querents Fi¬ gure, con llder the Sign aftendiag, what member of mans body it repreftnts, and tell the querent he hath a Mole, Scar or marke .*• on that part of his body reprefented by that Signe ; as if the Signe aftending be , itfs bn t he Neck : if in H , on the Arms*

Jbordof the Afcend.wt is in, and in that member reprefented fey that Signe, he or fhe hath another.

Then obferve the Signe defeendfng on the Cufp of the fixe houfe, and what part of mans body it perfonates> for in that member (ball you find another ; fo (hall yon difcover another in that member which is fignified by the Signe wherein the

Lord of the fixt is. , ^

Lad of all,confider what Signe the Moon is in, and what member of mans body it denotes, therein dial! you alfo find a Mark, Mole or Scarre : if h figmfiethe Mark, it*s a darkifH, obfeure, black one ; if c? , then it's ufually fome Scarre or Cut if he be in a fiery Signe, or elfe in any other Signe, a red m ole and you muft alwayes know, that if either the Signe, or the Planet fignifying the Mole, Mark or Scarre, be much affli&ed, the Mark or Scarre is the greater and more eminent.

If the Signe beMafculine, —and the Planet Mafculine, the Mole or Scar is on the right fide of the body.

The contrary judge, if the Signe be Feminine, and the Lord thereofin a Feminine Signe,

If the Significator of the Scarre or Mole be above the earth, (chit is, from the Cufp of the Alcendanc to the Cufp of the fe— venth, as either in the twelfth, eleventh, tenth, ninth, eighth or feventh) the Mark is on the forepart of the body, or via¬

ble to the eye, or on the out∗ fide of the member ; but if the Sig¬ nificator be under the earth, −viz∗ in the firfi, fecond, third, fourth, fift, fixt, the Mole or Scarre is on the back part of die body, not vifible, but on the in fide of the member.

If few degrees of a Signe doe alcend, or if the Lord of the Signe be in few degrees, the Mole, Mark or Scarre is in the up¬ per part of the member ∗ if the middle of the Signe afeend, or the Lord thereof in the middle,or neer the middle of the Signe, the Mole or Mirk is fo in the member, viz . in the middle : If the latter degrees afeend, or the or Lord of the firft or

fixt houfe be neer the laft degrees of the Sign, the Mole,Mark or Scir is rieere the lo wer part of the member.

If your Qnedion be radical!, the time rightly takert, and the party e&cjuiring be of fufficient age, or no Infant, you (hall rarely find errour in this rule : I have many times upon a fud−

of ^

m fome of the com¬ pany, and ever found it true, as many in this Gity well know.

In November and December y when Sigr.es of fhort afcenfcions are in the Afeendant, you muft be wary, for in regard many times the ® is not then vifible, and Clocks may faile, it’s poftible you may be deceived, andmiffeof a right Afeendant, for X and T doe each of them afcend in the fpacc of three quar¬ ters of an hour, and fome few minutes ; vz and in one hour and fome odde minutes ; but if you have the time of the day exafr, you need not ever miftruft the verity of your Judgment : which will infinitely fatisfie any that are Students herein, and caufe them to take great pleafure in the Art^ and make them fenfible, that there is as much fincerity in all the whole Art of Atfrologie, when it is rightly underftood and pra− dized, which at this day I muft confeifeit is by very few.

As thefie rules will hold certaine upon the body of every que¬ rent ^ and in every queftion, fo will they upon the body of the quefned , (mutatis , mutandis '■>} as if one. enquires fomewhat concerning his Wife5 then the Signe of the feventh houfe, and the Signe wherein the Lord of the feventh is, fhall fhew the

Womans Marks 5 fo (hall the Signe upon the Cufp of the twelfth, for that is the fixth from the feventh, and the Signe wherein the Lord of the twelfth is in, fhew two more Moles or Marks of the Woman.

U finally an Infortune in the Afeendant blemifhes the Face with fome Mole or Scarre according to his nature, for the firft houfe fignifies the Face, the fecond the Neck, the third the Armes and Shoulders, the fourth the Breft and Paps, the fifth the Heart, 8tc. and fo every houfe and Signe in order, accor¬ ding to fucceffion ; for what Signe foever is in the Afeendant, yet in every Queftion the firft houfe reprefents the Face : Many times if the]> be in d or cP of the © , the querent hath fome blemifh or the like near one of his Eyes 5 and this is ever true, . if the cf or d' be in Angles, and either of them have any ill afpeft to Mars∗ fi

If a Queftion be demanded of one a!) lent in a general! way, and the querent hath no relation to the party ; then the firft Houfe, the Lord of that Houfe and the > (hall lignifie the ab- fent party ; the Lord of the eight Houfe or Planet pofited ei¬ ther in the Houle or within five degrees of the Cufpe of the 8th Houfe (hall (hew his death or its quality.

In judging this Qneftion, lee firft whether the Lord of the Afcendant, the J> and Lord of the eight Houfe or Planet in the eight houfe be corporally joyned together ; or that the 2> Lord of the Alcendant and Lord of the eight are in oppolition either in the eight and lecond, or twelfth and fixt,for thefe are" arguments the party is deceafed,or fick,and very neer death.

See alfo if there be any tranflation of the light of the Lord of the Afcendartt unto the Lord of the eight, efpecially in de¬

grees deepe, lame or deficient ; or on the contrary, that there be any tranflation or carrying the vertue or influence of the Lord of the eight unto the Lord of the Afcendant ; or if. the Lord of the eight be pofited in the Afcendant,or if the Lord of the Afcendant ahd the D be placed in the fourth Houfe, thefe

are teftimonies the party abfent is dead.

If the Lord of the Afcendant be leperated from a bad Afpeft of the Lord of the fixt, you may fay the abfent hath been late- 1v ficke t if from the Lord of the eight, he hath been in danger Sf death, but is not dead; if from the Lord of the twelfth, he- hath been lately much troubled in minde, in feare ol imprifon- ment, arrefts,8tc. if from the Lord of the fecond,he hath been hard put to it for money, or in diftrefie for want ; if from the L»ffd of thefeventh, in forne quarrel! or contention ; if from the Lord of the ninth or third, he hath been crofled in his iourney (if he was at Sea by contrary windes,or Pyrats)rf at Land by Theeves, bad Wayes, &c. and fo of the reft. THE Ancients doe put this Queftion to thofe concerning the ninth houfe, and I conceive for no other reafon, theft becaufe it mull be granted* that all Ships are made for Travel! and Journeys: however, in regard the mod part of the Judg¬ment concerning its fafety or ruine is derived from the Afcen- dant and his Lord, and the 2> , 1 thought fit to place this Judg¬ment as belonging to the firft houfe.

Generally, the Signe amending and the 2> are Significators of the Ship, and what Goods are in her, the Lord of the Afcen- dant of thofe that faile in her : if in the Queftion demanded you find all thefe unfortunate, that is, if a malevolent Planet by pofition be placed in the Afcendant*/ Ke having dignities in the eighth: or if you find the Lord of the Afcendant in the eighth, in any ill configuration with the Lord of the eighth* twelfth, fourth or fixth, or the 2) combufi, or under the eartfv * you may judge the Ship is* loft, and the nien drowned, (unleffe you find reception betwixt themfelves) for then the Ship was cafually Shipwrackt, aftd fome of the Sea-men did efcape : but if you find the preceding Significators all of them freefrom mif- fortune, both Men and Goods are all fafe $ the more fafe if any reception be. But if the Afcendant and the 2> be infortunate* and the Lord of the Afcendant fortunate, the Ship is like to be drowned, but the men will be faved : Some for better know¬ledge and difcovery of what part of the Ship was like to be freeft fromdanger* have divided the feverall parts of the Ship*; and have^figaed to every of the twelve Signes, a part or place

To Sagitarius the Mariners themfelvesm

At the time when the Queftion is asked concerning the well or ill being of the Ship, fee which of theft Signes, or how ma¬ ny of them are fortunate, or hath the 7) or the Lord thereof fortunate∗ it’s an argument thofe parts of the Ship fo fignified, will have no defe&, or need repaire thereof, or –the Ship will receive any detriment in thofe parts : but which.of theft Signes you find unfortunate, or in what Signe you find the or Lord of the Signe where fhe is, unfortunate, in that place or part of the Ship afligne impediment and misfortune, and thereof give warning.

If 7? inftead of d" doe denunciate dammage, and be placed in the Mid-heaven, the Ship fhall receive prejudice by contrary Winds, and by leaks in the Ship, by rending or uling of bad Sailes ; and this misfortune (hall be greater or lelTer, according to the potency of the fignificator of that misfortune, and remote- nelie of the Fortune?.

If the fame Infortune be inthefeventh houfe, and he be T? , the latter part of the Ship will be in danger of misfortune, and the Sterne of the Ship will be broke.

Moreover, if any Infortune be in the Afcendant, fome lofie will be in the fore-part of the Ship, greater or leffe, according to the quality or ftrength of the fgnipaDr thereof; or if the Lord of the Afcendant be Retrograde, the Ship will proceed forward a while, but either returne or put into forae Harbour within a little time after her letting forth; and if the Lord of the Afcendant be in a moveable Signe and Retrograde, and the Lord of the fourth alfo, viz. Refblntionoj

An Example of a Ship at Sftto .

In December i £44, a Merchant in London having fent out a Ship to the Coafts of Spaine for Trade, had feverall timts newes that his Ship was loft or caft a– way, there having been a little before very Tempeftuous weather, in fo much that many Shippes were funk and ftiip– wrackt ; he would have –given 60 H# in the hundred for the affiiranee of her ; But fo general 1 was the report of her Ioffe, that none of the Enfurance company would meddle, no notupon any tearmes. A Friend of the Merchants propounds the Queftion unto me, JVb at I thought of the Ship, if funkjr living ? whereupon J ere&ed the Figure preceding, and havingwel) confidered what was requifite in this manner of Judgment, I gave my Opinion, That the Ship was not loft , but did lives atid though of late in forne danger , yet was now recovered. My Judgment was grounded upon the Confiderations in Art fol¬

lowing. ...

IN the firft place, the Afceudam being the iV∗. degr. and 35.

min. of s , (hewed the Bulk or Body of the Ship 3 there doth alfo afcend with thefe degrees of s three fixed Starresin our Horizon^ wholly almoft of the nature of T? : I find T? cafteth his O Sinitfer out of the eleventh houfe, but from a GardinaM Signe to, or very neer the Cufp of the afeending degrees, there¬by afflifting it : after his □ afpett, I found the jun liter Exalta¬tion, cafting a ∗ S ini Her to th^ degree afeending, interpofing her ^ betwixt the Afcendant and the c p afpefts of 5 and @ an the feventh, which otherwife had been dangerous, for all oppofite afpefts to the Afcendant in this Judgment are dange¬rous; From

all manner of Qu,e (lions. i 6%

- /From the Ascendants affli&ion both by the □ of T? , and pre¬fence of fixed Stars of his like nature, I judged the Ship was much of the nature of V∗, viz,, a fluggifh, heavy one, and of no good fpeed, or very found ; and $ being a weakly Signe,made me judge the condition, building and quality of the Ship was fuch ; [and it was fo confeffed.']

From hence, and for that y ism the ninth houfe, 1 judged the Ship had been in fome affii&ion or diftreffe in her Journey, occafioned from fudi cafuaities as are fignified by T? , viz , had received fome bruife,leak,dammage in or neer h(r Breft;becaufe T d the Signe wherein £ is, reprefents that part, thereby afflid-ing it.

. But in regard the 3) , who is Lady of the Afeendant, is poll-ted in the eleventh houfe, and in her Exaltation, is no manner of way impedited, but by a benevolent afped applying to a" a ©f 5 and © 9 and is by bodily prefence fo neee unto ^ , and all the SigrJficators above the Earth∗ (a thing very confiderable in this Judgment.)

; Befides, 1 obferved no Infortunes in Angles, which was one other good argument j for thefe confiderations, l judged the Ship was not caft away, but was living, and that the Sayldrs

and O dicers of the Ship were lively and in good condition.

.. The next Qjsere was. Where the Ship wasx upon what Co aft , and when any newes would come of her ?

Herein I coniidered –the 3) was fixed, and locally in the ele¬ venth houfe 5 \S f s a Southerne Signe, but in an Eaft quarter of Heaven, verging towards the South : her application to A of 5 , and he in v? , a South Signe and Weft Angle, made me Judge the Ship was South– weft from London^ and upon our own Goa ft, or neer thofe which lye betwixt Ireland and Wales fl . judged her at that time to be in fome Harbour , becaufe where¬ in the }) is, is fixed, and in the eleventh houfe, which is the houfe of Comfort and Relie fe ; awd that (he was put into fome Harbour to mend her Defefts or Rents : [It proved true that fbe was in the Weft, and in an Harbour

Of the time of receiving any Qjj e s t i o n.

It hath been difputed largely amongft the 'Arabians, who
Were excellent in the rdbludon of Horary Qneftions, what
time the Atfrologer (hould take forthe ground of his Queftion,
whether that time when the Qu* rent firft: comes into ones
Houfe or Clofet, oriirft fa^tites the Artifl , whether that is to bp
admitted for the moft proper time of ere&ing a Figure, and
giving Judgment thereupon.

Though fome have contented to this opinion, yet I could
never be fatisfied herein either with reafon or experience : for
let us admit one comes to demand# a Refolution of me, and we

qonvcrfe together a good while ; but in the end, fome occafion intervenes, and We depart: I hope no found Judgment will allow of this time to be the ‘Radix of a Queftion (whenas none is really demanded) viz . at what time he firft: faw me, or entred my houfe and fpake with me.

Without doubt the true houre of receiving any Queftion is then, when the Querent propounds his defire unto the Atfrolo – ger, even that very moment of time, in my opinion, is to be ac¬ cepted : for let us fuppofe a Letter is fent or delivered unto me, wherein I am defired to refolve fome doubts j perhaps I receive the Letter into my hands at three of clock in any day of the week, but in regard of fome occafions, doe not read it untill four or five hours after ; that very hour and minute of hour when I, break it open, and perceive the intention ofth t Querent* is the time to which I ought to erect my Figure, and– from thence to draw mine Attrologicall Judgment : This way and man¬ ner have I pradifed , and found fucceffe aniwerable : And Whereas Bmatm and fome others doe give warning that the AHrologian judge not his owne Queftion, and fay.he cannot tejl how to accept of a queftion from himfelfe \ this I conceive was realon, Becaufe he thought the Artifi ,WQuld be partial! to Ifmfelfe in his judgment : Verily I am of a contrary opinion and have found by many experiments* that at what hour the

mind or intention of the Aftrologer is heavily perplexed with^ or concerning the fucceffe of any matter wherein himfelfe is really concerned, I fay he may with great reafon accept of that hour for the true time of ere&ing his Scheame of Heaven, and he may (if not partiall) as well judge of that Figure ere&ed by himfelfe, as of any other; but herein I advife him to lay alide all love and partiality unto his owne Caufe. ^

Xf the Querent fbould be 'Rich or in a Capacity of fub ft {fence without Marriage .

Herein firft ! considered the general! difpofition of the Pla¬ nets, and found that the Major number of them (efpecially the two fortunes) were fwift in their motion, well pottted in hou- (es, no manner of wayes in a violent way, or by a forcible a~ ipe&affli&ing each other. 1 alfo well confidered that $ Lady of the afeendant was neere to Cor Leonifra Star of great vertue and influence, the D increafing in light, % almoft culmina¬ ting : From hence I colle&red thus much in general!, that he fhould fubfift in the Common-wealthy and live in good ranke and quality amongft his Neighbours, 8 sc. (quoad capax) accord¬ ing to his calling.

Secondly , whether he ftiould be rich or not > In refolving this Queftion, I confidered, that the Lord of the fecond is pofited in the Angle of the Eaft, and that the Lord of the ieeond, viz . ^ is Lord of ® or Difpofitor thereof, and is neere Spica HE in 1 8. of tes . Then 1 obferved that % a generall figniftcator of Wealth, was in his exaltation and Angular, calling his □ fini- fterveryneer to the degree amending, which □ in fignes of kng afeenfions, we ufualiy repute a A . I alfo found the }>fe-

perated newly from a ^ of d Lord of the fecond, and fignl-
ficator of the thing demanded,and i nrnediately after feperated
from cT of y , then inftantly applying to the d, of $ fignifi-
cator of the Querent , transferring- thereby both-the vertue and
influence of y and d to the proper fignificator of the Querent 5
the D is alfo difpofed by the ® and he is ft rang and power¬
fully and as fhe hath a generall fignification in every Queftiqn,
fo being no wayes unfortunate (he promifed the Querent much
good. Laftly, 1 confidered that$ was in a fixed fign and in d
his own termes : from all which teftimonies aforefaid,l judged
that the Demandant would acquire an Eftate, andiiave a com¬
petent fortune inK this world, but attaine k with labour and
care, becaufe it is fignified by an Infortune j fo to the day here¬
of he hath : but becaufe d Lord of the ieventh houfe (which
is the houfe. of Women and Wives)hath the moft materiall fig-
nification of the thing demanded* viz . Wealth and Riches. I
advized to marry, and acquainted him* that without Marriage
he fliould nothing fo well fubfift.

By wbat.meanes , or hwMUine Riches .

Herein you muft confider the Planet or Planets promifing
Wealth j d in our Scheame being Lord of the* fecond houfe
and of ® is the Planet we muft principal ly confider 5 for in the
fecond houfe you finde no Planet* as he is Lord of the fecond
and placed in the afeendant, he intimates an eftate to be got by
the Q uerents owne induftry, and becaufe the Significator of
the thing demanded is pofited in the afcestdant, it argues that
an eftate or increafe thereof would come fomewhat eafily or
with leffe labour then expe&ed, but d being an infortune
Something lefleps that point in our pofiture at this time and
as d is Lord of the (even th houfe , and thereby fignifiedf
(Women, -&c.) I acquainted him he would marry a Woman
who would produce him a good fortune, and it fixed, and more
then he could very welliooke for \ which I judged firft by the
Lord of the feventh his being in the afeendaht and neer fo emi¬
nent a fixed Starre ; as alfo becaufe -y^ho is Lady of his wives
houfe of fubfiaiice, viz. the eight, is. fo well fortified. I after-
i i ^ wards

wards confidered the > was Lady of the tenth houfe (which fighified his Trade) that (he was transferring the light and na¬ ture of 2 and d” to the Querent ; wherefore I adviled him to diligence in his profetfion* and that he (hould thereby attaine a very good or competent Eftate. He hath*as he informes me, had a good fortune with his Wife, both Money and Land * and for his Trading it hath been very good ; for V in the tenth is a certaine and infallible argument (according to naturall cau- fes) that the querent (hall have plenty of Trading* or exercife a gainfull Profeffion.

He Time Wberu

All the fignifieators either in the Aicendant or Oriental! quarter of heaven, and five of the Planets fwift in their moti- tion* promife Subftance in a fmall compafle of time* after the propofall of the Queftion. Lord of the fecond houfe* and of ® * the principall thing inquired of* being fwift in motion argues the lame.

The diftance of the Attendant from & being about t wo de¬ grees, did in this way of judgement fignifie two yeers or there¬ abouts* U what time he had a Portion with his Wife: fome may winder why c? being peregrine (hall fignifie any good to the querent. I fay to that* he being Lord of the fecond houfe and of the feventh* and the promifing Planet of the thing de¬ manded* (hall as well (hew the rime When* as alfb the perfor¬ mance of what he fignifies*(but not without fome manner of obftruftion *) and herein no queftion ought to be made* fkh in civill fociecies of mea*the wicked or ungracious doe as well many good offices of love for their Friends* as others better qualified. In the next place* I obferved what quantity of de¬ grees the 2> wanted of her perfeft d with £ *& I found they were fix degrees* 27. miautes * from hence and the former confidera- tion* I concluded* that about two yeers after the Q,ueftion pro¬ pounded* or fooner* hi (hould ienfibly perceive a melioration in Eftate by meanes of a Wife* or by his 0 wne proper diligence andinduftry* and about 1640* which was fix yeers after the Queftion* haftiould have very great trading* and livedn exce-

lent repute have many good Friends and Acquaintance, whofe meanes he fhould improve hisEftate: And the reafon why I judged augmentation of his Wealth by means of Friends was, becaufe $ is feated on the cufp of the eleventh' houfe, which lignifieth Friendlhip, &c. for in all Judgments you muft warily conlider the nature of the houfe wherein the applicati¬ on of your Significators are,&c. as alfo,when you judge in this, nature of things contingent, you muft meafure out the time when they (hall happen according to reafon, and mix Art and Reafon together, and not too much rely upon the generall rules of Art, for Abs te & a Scientia •

Cf that Planet or Planets impediting the effecting or performance of what is demanded in ever) Quefiion.

It is confiderable in all Demands, that you be carefiill to know what that Planet is, who impedites the matter, or hin¬ ders it, that it fhall take no effeft, and we may ju ftly call him Strongs Hurt fulls De/lrcyor, Abfciffots becaufe he onely deftroyes and perverts the nature of the Queftion, when othcrwayes it would come to a good conclufion : We receive judgment here¬ in from that Planet with whom the Lord of the Afcendant is joyned, or the Significator of the thing queiited after, whether it be the I herfelfe, or that (he is partaker with the Lord of the Afcendant or no, or is Significant of the thing De¬ manded.

In refolving this you muft conlider the Planet unto whom the Significant of the Qu£rent is joyned, or the Significant oi the thing required, or the D, and obferve how that Planet is difpofed,anduntowhomheisjoyned$ for if t he Lord of the Afcendant, or D , or Significant of the matter propounded. Is joyned to an evill Planet, evill difpofed, without reception ; or if he be not ill difpofed, but joyned to an Infortunes and he ill difpofed, and receive him not, it prenotes the deftru&ion of the thing queiited.

We underhand a Planet to be ill difpofed, when Peregrines Retrogrades Combufis Cadent , from the Afcendant or houfe of the thing demanded, fo that he beholds not the houfe, or at leaft

' the

the Lord of the houfe, in this nature the afpcd to the houfe is better then to the Lord thereof ; fo any Planet in his Fall or iDetriment, may properly be called Detfroyer or Obftruttorj or Planet impediting.

Moreover, if the Significatorol the Querent, or thing fought after, or }) , or Planet to whom (lie is joyned, whether (he is a Significatrix , or hath participation in the Queftion, be joyned to an unfortunate Planet, viz, Retrograde , Cornbufl , Cadent , then obferve if Reception intervene ; which if there be, it figniffes the perfedion of the matter, though with wearineffe and much folicitation : If no reception be, the matter will come to nothing, though there have'bsen much probability of its per¬ formance.

If the Planet who receives the Lord of the Afcendant, or the ' j) , or Lord of the thing Demanded,or the Planet who receives any of them, be free from misfortunes, neither receiving or re¬ ceived, it perfeds the matter with facility.

If the Planet to whom the Lord of the Afcendant, or the D , or Lord of the matter fought after, be free from the Infortunes. , and is joyned to any benevolent Planet who is in afped with a malevolent, and he impedited and not receiving the former Planet, the matter will not then be brought to perfedion, or come to any good conclufion.

Doe you hill materially coniider if the Planets afpeds be without reception, for when they are in reception, things are brought to pafle, though with fome trouble ; ever confidci ing whether any Planet ^doe cut off the light and vertue of the Significators before their perfed with an evill Planet ; if fuch a thing happen, it hinders not5but that the matter may be per¬ fected and accomplifhed : but if no abfciffion of light intervene, whereby the malevolence of the Infortune may be taken off, the matter is prohibited, and will not beeffeded.

You muft notwithftanding judge if Reception doe intervene whether it be not by □ or cP afped, for then if a Planet be

evill difpofed, then the reception profiteth nothing; the Me
when he that is received is impedited : but if reception be by
or A 5 you may confide the matter will be effeded ; or if the
Planet who receives be at that time well difpofed, let the recep-

tion be by any manner of afpeft, the matter is performed, Lie*'
the aipeft □ or cP ; if the afpe& be A or it performes the
thing, whether the Significator be received or not 5 but provi¬
ded, the afpeft be not feparated, but applying 5 if the Signified- -
tor be joyned with a Fortune not impedited, the thing will be
perfected. -

If any Planet tranflate the light or vertue betwixt one Signi -
ficator and another, and he to whom the light is mandated be
an Irfortune} and impedited, the Queftion or matter is deftroyed,
unlede the Infortune be againe received. *

If the Significator of the Querent, or the Mfon5 and Signified-
ten* of the thing looked after, be joyned to any Planet who col¬
lets the light of both Planets, be he an Infortune or inform-1
irate, hedeflroyes the matter, and permits it not to be accom-
pliflied, unleffe himfelfe receive both the Significator s 5 if he re¬
ceive one ondy of them, it matters not, the matter will not be-
performed.

Coniider likewife, whether the Significator of the Querent be
in the houfe of the thing dtrhred, or going to d of his Lord, '
this intimates the Querent is going to the thing quelited after y
if the Significator of the thing demanded be found in the Afcen-
dant$ or haifeningjto the d of the Significator of the Querent,*
at imports the matter enquired of, or thing ddired fhall come

Of a Brother that is abfenl*

The Afcendant and his Lord are the Querents' Significator, the cufp of the third houfe (hall be the Afcendant of the Bro¬ ther that is abfent, the fourth the abfents houfe of Subftance,, and fo in order,

Gonfider in what condition the Lord of the third is in, and ! in what houfe,and how the Planets do afpeft him,and whether he be in the afpeft of the good or evil! Planets, and what that afpeft is they have to each other, or whether they are in corpo- rall Conjun&ion $ for if the Lord of the third be in the third and themnfortunate Planets have no □ or & afpeft unto him,- you may judge the Brother is in health , but if the malignant Planets behold him with a □ or <P , without reception, you may fay, the Bother lives, is in health, but he is in great per¬ plexity, difeontent and forrow > but if they behold him with the aforefaid afpe&s^and be in reception,you may fay, the Bro¬ ther is in great diftrefie, but he will with eafe evade it, and free himfelfe from his prefen t fad condition : but if the fortunate Planets behold him wth a ^ or A a(pe&, without reception, or with a □ or cP with reception, yoii may judge the Brother is in good health and is well content to day in the place where he then is : if the fortunate Planets behold him with ^ or A and with reception, you may tell the Querent his Brother is in health, and wants nothing in this world to make him happy :

but if the Lord of the third be in the fourth, w7hieh is his owne fecond houfe, without the afpe£ of the malignant Planets, he endeavours to get an Eftate or fortune in that Country where¬ in he is at the time of theere&lng the Scheame ; but if the Lord of the third be in the fifth houfe, and is joyned with the Lord of the fifth houfe, with reception of a Fortune or not, as long as the Lord of the fifth houfe is not impedited in any grievous manner,k*s an argument the abfent Brother is in health, is jo¬ cund and merry, and well liketh the converfation of the men of that Country where he is : if he be a Fortune with whom the Significator of the Brother is in d with, or in ^ or A with reception, you may then more fafely pronounce the Brother to

be in a good condition ; yet if the Lord of the third be in the fifth voyd of courfe, or in perfect d with 'any of the infortu- , nate Planets, without reception, and thole unfortunate Pla¬ nets be themfelves iropedited, it's an argument the abfent Bro¬ ther is indilpoled in health, crazy and not contented in the place where he is : if you find the Broth; r's fignificator in other houfes which are oar naturally ill [as the lixth, eighth and twelfth houfes are) then he is not weii pleated, but yet no hurt will come of it.

If the Brothel's Significator be found in the eighth houle, and is either corporally or by * or A afpeft joyned to a Fortune , you may judge the Brother is not very well, yet not fo ill, that he need any thing doubt of his wel- being 5 however, jhe is in- difpofed. ■

he be joyned to evill Planets by bad afpefts, and out of the fixthoufe, the abfent Brother is infirme; the fame you may judge if the Lord of the lixt be in the third, unleffe he have dig¬ nities inthe Signe, and be in thofe dignities.

If you find theBrother of -the Querent to be ill, fee if the Lord of the third be in d with the Lord of the eighth, or is entring Combuftion, it's likely then he will dye of that infir¬ mity 5 but if you find his Significator in the feventh, fay, he is in the fame Country in which he went, and not yet gone

out of it, he continues there as a Stranger or Sojourner,is neb* ther well or ill, but fo fo.

If the Significator be in the eighth, he doubts himfelf that he (hall dye ; and the more dubious he is, if his Significator be ei¬ ther combufi,or in d with theLord of the eighth in the eighth, or in aipeft by □ or cp of the Infortunes out of the eighth.

If his fignificator be in the ninth, then is he gone from the place to which he firft went into a further Country, or if ca¬ pable, he is entred into feme religious Order, or is imployed by thole that are in Order, viz. Religious Men, or poflibly ac- coi ding to his cjuality, is imployed in fome journey far difiant from his former aboad.

If his fignificator be in the tenth, and joyned by d orina- fpeftwith the fortunes by A or * afpe&, efpecially with re¬ ception, he hath then got fionie imployment, Office or Com-

snand in the Country where he is, and is in good eftimatioh and lives in a credible way : but if he be joyned to the infor¬ tunes, or in □ or cP of them, or any other wayes be impe- ditedbythem, or Combuft in the tenth ; it may be feared he

is dead. ** t

If he be in the eleventh Houfe, joyned to the Fortunes by any good afpeft * or if he be in d with the Lord of the ele¬ venth ; he is then fafe at the houfe of a friend, and is pleafant and merry : but if evil! Planets affiift him in that Houfe, or caft their malevolent beames Unto him ; then is he tnaleconten- ted, and not well pleafed with his prefent condition.

If he be in the twelfth Houfe, joyned to the Fortunes with re¬ ception, and that orthofe Fortunes not impedited > he then trucks for Horfes, or great Cattle, is turned Grafter, or is Ma¬ iler of a Horfe, an Heftier, a Drover of Cattle, or one that drives Cattle to Market, according to the quality of the per-

fon inquired after. .

If he be unfortunate in the twelfth, or in bad afpeft with the infortunes,or in afpeft with the Lord of the eight,or Cofo- buft*, the man is difeontent, and doubts he Ihall never fee hi$ Country againe *, and well he may, for its probable he will

dye there. t

If he be in the firft , the abfent Brother is frolicke and mer¬ ry, and extreame well pleafed where he is 5 and they much love and refpeft him where he is.

If he be in the fecond,its probable the man can by no means come away ; either he is detained as prifoner, or hath done Lome fuch a& as that he is not capable of coming away ; yet il the Significiator be Retrograde, he will make hard Ihiftto e- feape when ever opportunity is offered.

I have been fomewhat more tedious in this judgement, b£- caufe it is as a Key to ail the reft : F or if any aske of their F ther being abfent , let the fourth Houfe be the Afcendant of him and fo run round the twelve Houles in your judgement for the Father as you have done for the Brother, ever having this Confideration, that the fecond Houle from the Afcendant

Let the tenth houfe, a Planet or Planets poll ted therein, and Lord of that houfe fignifie the Price, that is, Whether it will be fold deaf or deer •

If you find the Lord of the Afcendant and Lord of the fe~ jf agree* venth in any amicable afpe&, the Lord ofthe feventh applying to the Lord of the Afcendant, you may judge the Seller hath good will to fell and to deale with the Querem or Buyer : and if the Significators be in any eflentiall Dignities upon this their application or tranflation of light $ or their application be by d , it's then probable they will agree and conclude upon the Pur chafe with little labour : if the application or tranflation of light be by □ or < P , the two Parties will at Iaft bargainee but with many words and probabilities of breaking off, and after much expence of time.

Conftder alfo, if the Lord of the Afcendant or the 2> apply to the Lord of the fourth, or the Lord of the fourth or the £ to the Lord of the afcendant, and whether onely the Lord of the fourth apply to the Lord of the af:endant, and he receive him in any of his Dignities, or if the Lord of the afcendant be in the fourth, or the J> , or the Lord of the fourth in the afcen¬ dant, then (hall the Party enquiring buy the Houfe or Inheri- ' tahce at that time in queftion.

.The Angle of the. Weft fhall fignifie the Herbage fhereof,and
the quality and quantity, but the Medium Coeli is fignifier of
the Wood, Trees and Plants growing thereupon.

H avfhg confidered what precedes, conlider the Angle of the Weft, or the feventh houfe, which will declare unto thee the date and quality of the Herbage, or fmaller Plants of the ground, for if you find either ¥ or $, or the Leri of the fe¬ venth in the feventh, it9s an argument the Land yeelds plenty v of GrafTe,Corne, or what is feafonably required from it, if an Infortune be there, judge the coutrary, &c0 - ~ ,

la confideration of the property of the earth, have refpeft Quality §f to the fouth houfe and Signe of the fourth, for if T SI or **be the on the cufp of the houfe, it’s a hilly, mountainous, dry and hard piece of ground, or a great part of it is fo 5 ifeither n %

If zz or sz , it’s neither very hilly or very plaine, but there is grounds of both forts, and in nature part of it is good, and part not fo : if s ini or K , then there is no doubt but there is Lome pretty River, RIvolet, or good ftore of Water.

You mull for the perfeft knowledge of the quality and na¬ ture of the Soyle, obferve this generall rule. That if an Inf of - tme be in the Signe of the fourth. Of turning the courfe of Rivers , or bringing Water into ones Ground or Houfey either by Conduit or Piper.

IN this manner of judgment, you muft principally confider the pofition and ftrengch of T? and the 5 , and in what aipeft they or either of them are in, either with ^ or 9 5 for if yea find h Direct, fwift in Motion, Oriental!, and the }) in the third, eleventh or fifth houle, without any afpeft either good

or evill to d* , it’s an argument, the Work that is to be under¬ taken will have good fucceffe, be brought to a good conclufion, and that the Querent will have profperity and credit by it, and the matter eafily performed , and this the rather, if the j> apply to that Planet who is Lord of that Signe wherein file is, and he receive her in any of his Dignities ; and if that Planet who is receiver of the)) be a Fortune , and is amending in his latitude, and in a fixed Signe, the Querent fiiall not need tofeare, but that there will be water enough, and that it will runne plenti¬ fully, and the Water- courfe will long continue : if there be in the tenth houle either '% or $, but efpecially V, it’s a lure argument the River, Channel!, Conduit, Pipe, or Water- work lhali remainemany a yeer.

In further confederation of this judgment, if you find T? in the eleventh, very ftrong and potent, and the]) in or A un¬ to him, and the Dilpofitor of the I) in a fixed Signe, or a com¬ mon one, or the j) her (elfe in one of thofe Signes producing

M of the Earth* -

TH E refolution of this Qjieftion is various according to the nature of its propofall, or according to the nature and quality of the thing enquired after, viz. whether Money r Plate or Jewels,or things eafily moveable, or for Treafure long fince obftured or hid, the Querent not knowing what it is : or ' if it be. Whether there be any Mine of Gold, Silver or Iron, or any other Minerals in .'the Ground', Mannor or Lord fh ip now queftioned j then it is requifiteto kaow whether the Querent did hide or obfcure this Treafure now enquired after, or whole ft was, or what relation the party that did fo had unto him, or whether that he aske in a generall way of Treafure hid, not being able to difcover either when, where, or whofe, or what it is >

If the Querent did hide his owne Plate, Money or Jewels in any part of his Ground, or in his houle, and hath forgotten5 whereabouts, you mtift herein obferve the Signe of the lecond* houle, the Lord thereof, what Signe and quarter of Heaven he is in, as alfo, the Signe of the fourth and his Lord, and what quarter of Heaven they lignifie : the Lord of the lecond and of the fourth in Angles, the Plate is ftill in the houle, or in the ground,^ and not removed 5 but if thefe Planets be not in An¬ gles, but an Infortune , without dignities, be either in the fourth' or feventh, there's then either part of it, or all removed and made away ; and if your Figure promife, that your Goods are not removed, to find in what part they are, have recourle to* the fir ft Chapter of this houle concerning things hid, i f the Qtjeftion be concerning Tr&afure abfolutely? without

fourth, there is alfo Treafure, or if you find .9 in ∗5 in the fourt h, not labouring with any misfortune, it’s probable there is Treafure there, for you mull know there is no Planet unfor¬ tunate, when he is in his owne houfe, or eifentiaily dignified, and aSlgnificator.

If you are ignorant of the nature and quality of theTrea- fare, or thing obfeured, then fee to the Planet who fignifieth the Treafure, and confider if he be Lord ot the feventh houfe, and examine his nature and property, if he be fo 5 if he be not Lord of the feventh, joyne the Lord of the feventh in judg¬ ment with him, and fo frame a mixture for the quality of the thing.

But if that Planet who is Significator of the Treafure be not Lord of the 7th or have affinity with him, then abfolutely take the Lord of the feventh tofignifie the nature and Species of the Treafure ; who if he be the ®, and he in his houfe or exaltati- ' on, there is Gold there, or precious Stones or Jewels of that colour, or neer to the colour of the ® .

If one fhallbave Children, yea or no .?

i ! – . ~

WHEN this queftion is demanded by a man or wo¬
man, long before marriage, or by fome ancient
Batchelour, or Maid, Whether they flj all ever have any
Child or Children, yea or not ? herein generally you are
to consider, whether the Signe upon the fifth, orafccnding,
be of thofe we call Fruitful!, yea or no, (viz* S fll X) and
whether the Lord of the afeendant (be the Signe what it will)
or the I> be in afpeft with the Lord of the fifth houfe, and that
afpeft be either d ^ A or □ (though d is not properly an
afpeft) which if it befo, and the Planet to whom theLord
of the fifth doth apply, or is in afpeft with, be free from Com–
buttion, and other Accidental! or Effentiall misfortunes, its
an argument the good old Batchelour or ftale Maid, or who¬
ever propounds the Qjueftion, (hall have Children or Iflue ere
they dye ; In like cafe judge, if the Lord of the fifth be in the
afeendant, or elfe the D, or the Lord of the afeendant in the
fifth, for this is a ftrong argument of having IfTue ©r Children ,
but if neither the Lord of the afeendant or the D apply to the
Lord of the fifth, yet if there be rendring of vertueor light one
unto another, or translation or colleftion by or from the prin¬
cipal! 'Signtfk'Atm, you may ttiil continue your judgment, that

the Querent (hall have iffue, but not To foone, as if it had been
forefeen by the firft manner of judgement. After all this, have
refpeft to that Planet who is receiver of the Difpofiii jn of the
Significators j who if he be clcer from misfortune or afrli&ion,
sns.from Retrogradation, Combuftion, or Cadency in Honfe,
it gives great hopes of iftue. See alfo if that Planet from whom
the is operated be Lord of the fife Signe from the Signe
wherein the Planet is to whom the }) applies, and both thefe
Planets have any afpeffc to each other ; that alfo doth teftifis
the party (hall have Children or a Childe. if no Afpeft hap¬
pen betwixt them, its not then likely he will have any; and
yet fome fay, that if the above named Planets or Significators
be not in any Afpefr, yet if the Planet to whom the 2> applies
be In an Angle, the Querent may have IlTue.

If a Woman aske3xvbeiber foe may conceive ?

Many tim ,'S a Woman married, having been long without Children, may inquire, whether (lie is like to Conceive, yea or no ? In this CLieftion you are to confider :

If the Lord of the Afcend int be in tl\e feventh, or the Lord' of the lift in the firft, or the Lord of the Krft in the fift, or if Lord of the lift be in the feventh, or the Lord of the feventh in the lift, or the J> with him,or good Planets in the Ai Cendant, or with the Lord of the ftft,or in any of the Angles, Ihe may then conceive:but it none ofthe(e teiliihonies concur remand you find barren Signs andill Planets to be in the iormer places, Ihe nei¬ ther is at prefent concieved, or will hereafter conceive, if good and bad Planets be mixed together, Ihe may perhaps conceive or have children,, but they will not live : if S', rn. or X be in the Afceniant or file, (he may have children ; out if 51 be there, v ihe neither is at prelent, or hardly alter will be with- Child. Sigms of a long crfl/ort Sickrtcjfe.

If the Signe of the fixt be fixed, expeft a long Difeafe ; a moveable Signe, fhort continuance ; a common Signe, a medi¬ ocrity, neither too long or fhort, but for the moft part, an ah* teration of the Difeafe, and returne of it againe.

Theiaft degrees of any Signe being upon theeufp of the fixt home, the difeafe is almofl at an end, or is either altering for kctt*r or worfe : fixed Signes doe argue the humour not to be expulfed Without much time and difficulty.

When the Lord of the fixt is of evill influence, and placed in the fixt, its an ill Gwen* or an unlucky figneof a durable and great ficknefle : but if in the like nature a Fortune be there, the Difeafe will foon be cured, nor is it mortal! : When the Lord of the fixt is ftronger then the Lord of the afeendant, the Di£ eaie is like to encrcafe, advife the Patient to take fit remedies, for Nature js weaker then the Difeafe ; but if the Lord of the lixt houfe be more weak then the Lord of the afeendant, then be allured nature will be able to overcome the malignity of the Difeafe, without much afliftanceof the Phyfician : When h is Lord of the fixt houfe, and fixed in the Sign, he is in,heex- treamly prolongs the Difeafe 5 if he be Retrograde or flow in motion, he performes the fame ;hut if he be in a moveable Sign and in any of his Termes, or fwift in motion, he is not then much unfortunate, or will he greatly prolong the Difeafe : a moveable Signe in the fixt, and the D likewife, and no impe¬ diment otherwayes appearing, the Difeafe continues but a while 5 common Signes doe more long continue any infirmity, except X , for that being upon thccufp of the fixt, I ever found

' it equivalent to a moveable Signe : If the 3> apply by ill afped to the Lord of the afcendant, the Difeafe encreafes ; if the D be in the fixt in ill afped with 9, the lick may thank himfelfe for his Dileafe, he is a difbrderly fellow, and of ill Dyet ; and

if 9 be in TTt ,8 cc. he hath got a clap of feme uncleane woman j if a woman ask, fhe hath too great Flux of the Whites or Reis, or the Difeafe is occasioned by her owne Folly, &c.

" If the Lord of the lixt apply to the Lord of the afcendant by □ or cP , the Difeafe is∗encreaiing, and is not yet at his height or full growth ; fo alfo the Lord of the lixt in the eighth or twelfth, is an ill argument and great preemption, that the par- ty Tick muil be more afflded ere his Dileafe leave him : If an in- fortunate Planet be in the lixt, and is removing out of one Sign

' into another, the Difeafe will Ipeedily alter : if its delired IFbeX) or how long it may he before it doe jo ? then lee how many degrees the malevolent Planet wants ere he can get out of the

: Signe, and thereby judge fo many Moneth, Weeks or Dayes ac¬ cording to the nature and quality of the Signe : if the Lord of <he lixt be Retrograde, Combuft in the eighth or twelfth, and and in □ , cP or d with T? , d , or Lord of the eighth or fourth of the Figure, he prenotes much infirmity, a long con¬ tinued and ftidden alteration of the Difeafe from better to Worfe, if not Death it felfe ; the Lord of the lixt in the eighth, and Lord of the eighth in the lixt, there being alfo a if or A afped betwixt both Significators , you lhall not doubt of the death of the Patient at that time, for the Heavens doe declare, that Nature is not yet to overcome, or fo weak, but that the lick fhali overcome it : if there happen any A ^ or d betwixt the Lord of the lixt aild if , and he in the ninth, and the]) le- parate from the Lord of the lixt to If , fo in the ninth houfe poiited, it's an allured argument, that the Medicines which the Phimian prescribes, or whichthe Patient hath already taken, have caufed the party to be very lick at time of their takings and whileft they operated,and that the Medicines wrought effe- dually in the outward parts ot the Body, but afterwards the fick felt great comfort∗, and hath found great emendation in the parts of his Body, affiided at time of his firft being ill ∗ either ^ or d 5 or any unfortunate Planet in the fixe, threatens .great

danger in the StcknefTe, yet if he be well affefied or efTentially fortified, he hurts little y and you may rather judge, the Difeale is happened cafually and fuddenly, then upon any prepared matter in the Body beforehand, therefore let the lick be of good comfort : fo likewise when you find a Benevolent Planet well fortified in the fixt, and he not author of the Difeafe, you may fafely judge, the Difeafe is not, or will be permanent.

Many times it happens that in fome Country. townes, peo- pie are afraid of Witches j If the Lord of the twelfth be in the fixt when miftrufi is had byany fiich Querent, it's a ilrong argument the fuppofidon is true, that the party is vexed by an evil! Spi¬ rit, or by Fafeination •, when you find in the QiicfUon of a lick* party, the Lord of the fixt in the afeendant, and the Lord ot the afeendant in the fixt,, you may give Judgment the Difeafe hath been of longcondnuance,and wrll continue untill one ot the Signijicators get out of theSigne wherein he is 5 and if it happen, at the time of the Planets tranfit out of one Signe into another, he meet with the Q or cP of the Lord of the fourth or eighth, or with the oppreffing or malicious afpett of h or d , and they flow in motion, in Signes odioufly beholding or afpe- fting one another, it’s a very great figne the fick will l then [de¬ part this Life , when you find the Lord of the fixt amitted by the □ or c P of the Lord of the afeendant in Azhnen degrees, a £ g for the Phyflcian, the Difeafe is uncurable, and the lick par¬ ty continually pained 1 When the Lord of the fixt is in the ai- cendant, the Difeafe will continue, but the paine doth fheken and feems unite removed at feme times, or the Patient fome- times is not (enfible of paine : but if he be in a Cadent houfe, the Difeafe is neither very grievous, or will it endure any long fpace of time; fo alfo good Planets in the fixt do promifea good end of the Difeafe ; evill the contrary : ufually a malig¬ nant Planet in the fixt, ftiew • & Difeafe unfetled, fo doth alio- the Lord of the fixt if he be in the fixt, eighth or twelfth, de- no e a Diieaie not eafily* curable ; if the Lord oi the afeendant and D be free from the □, <P or d of h or d , or any infor- tunate Planer, and be Direff, free from Combuflion, fwift in Motion, not Peregrine, or in his Fall or Detriment, or in the

eighth or fixt, or in any afpeft with the Lord- of the twelfth.

fixe or eighth, ids a faire fignification of health and recovery ; when the Lord of the afeendant is in the fourth or eighth, and is not affiiCted, he fhall not fignifo death, but recovery * but if he be unfortunate in the fourth, it notes great difficulty ere the party be cured ; but if the Lord of the afeendant be himfelfe un¬ fortunate, either in his houfe, or by Retrogradation, Perrgri- nation, Combuftion, or be in h is F all or Detriment, ids pofli- bie he may be cured, but within a (hort time after he will re- iapfe, dye, or fall into fome defperate infirmity ; when alfo the Lord of the afeendant is infortunated by the Lord of the fixe or twelfth, aud in a bad afpeCt of he D , there's danger in the Dif¬ eafe threatned j above all, have a care if h be Lord of the a£ Cendant, an i in his Dignities, f! >w, dioiiniffied in light, Re¬ trograde, for then the Patient or Querent will be long fick * Judge the contrary of the ilgnificadon of h when oiherwayes qualified.

The Lord of the afeendant in an Angle, having no configu¬ ration to any malevolent Planet, but being in a benevolent houfe of Heaven, and not under the 0 beam :s, or Retrograde, you may' judge the Qjerent is in no danger at this time : when the Lord of the alL ndant is fwift in motion, and entring into another Signe, or going out of his, c wne houfe into another, fo it be not into the Signe of the lixt or twelfth, the Difeafe will quickly determine : if the Lord of the afeendant be not affliCted in himfelfe, or by any ill afpeCt of the malevolent Pla- nets,or Planets of a contrary nature unto himfelfe, but is fwift in motion,and in fome good afpeCt with the fortunate Planets, ids a ftrong argument that tht nature of the Difeafed or Qjerm is nothing diminifhed, but is able to overcome the malignity of the Difeafe, and thac in a very ffiort time ; but if the Significaior of ihe fick be afflicted powerfully, ids a figne of a firong fit of fickneffe j the greater it will be, when the Significator of life is more weak then the Planet afflicting : if all the Sigmp caters of the Difeafe br in Signes fixed, it prenotes a great fpace of time ere the Patient can be cured, nor will the cure be eaiiiy perfect¬ ed ; when the Lord of the afeendant is applied unto by a male¬ volent Planet, it retards the cure, prolongs the infirmity, though at p refen t great hopes appeare ; fo doth alfo the 2

When you find iri afcending, you may for the moft part | idge, the party was caufe of his owne infirmneiTe, euher by peevifhneffe, folly, choller or the like ^ and your judgment will be more firme, if *d be then placed in TTL : if both the L«-minaries be in Cadent houfes, -and the Planet or Planets that are their Difpolitors be unfortunate, the Querent may expeef a terrible ficknefle } if the Fortunes affift in judgment, yet will the ficknefle be of long continuance, and of a fharp Difeafe, prove chronick, yet beyond all expedition, the lick party will reco¬ver ; and the more confident be in your judgment, by how much more ftron g the Fortunes are dignified above the Infor¬tunes s when you find d Lord of the afeendant and pofited in the fixthou^e, in ^ or a with $, nay, if he be in □ or eP of her, there's no great danger.

If the Lord of the fixt be Combuft or Retrograde,in his Fall or Detriment, and in the eighth, in d 3 □ or cP of 1? or d" , you may-doubt, and not unjuftly, that the Difeafe will never leave the fick party till death ; and if the]) have equall tefti* mony to the former Sianipcators , viz. if fhe alfo apply to the □

■1 P or d of the Lord oftheeight,your former judgment will be very certaine ; If either the D or Lord of the afeendant be in □ d or cP to a benevolent Planet, Retrograde, the fick will re¬cover, but not in hafte, for it's an argument of the prolongati¬on of the Difeafe, and relapfing out of one Difeafe into ano* t her : When you find the receded from cP of the to be fwift in motion, and haftens to the □ or of d it will come to pafle, that the Difeafe which the Querent now under-roes*> will be grievous and mortall $ but if (he falute at the fame

There's julually no danger if the D at time of the Queftion be ftrong, and the Lord of the afcendant free from misfortune, and in no afpeft to the Lord of the fixt, yet when the D at time of the Queftion applies to h , or is impedited, it*s an ill Omen and fign of a fickneffe at hand, and that the Querent miftrufts his owne health, is (ick, but knowes not were to complaine, or in what part of the Body the infirmity is placed.

At the time of ones firft lying down,if the 2> be placed in the; afcendant, in o' Dor :<p of T? ore? ,or of any other unfortunate Planet, it's a fign of ill,& (hews ill,unlefTe the D be in recepti¬ on with the Planet or Planets fo affli&ing : It's very confidera* ble to obferve at the time of the Queftion, what Signe the $ is in ; if in a fixed, expeft a long fit of fickneffe ; in a moveable Signe, quick difpatch *,in a Common or Double- bodied Signe, the Difeafe will not be very difficult to cure,but fomewhat long in caring : and thus much more you muft confider, that if there be tranflition of light (from that Planet who rsDifpofitor of the }> , and he unfortunate) to the Lord of the afcendant, or Signe afcending, it gives great fufpition that the Querent will . have a (harp fickneffe, according to the nature of the Signes and Planets fignifying the infirmity.

When you find there is any reception between the Lord of the attendant and Lord of the eighth, and neither of them in- fommated by the malignant Planets, arter defperation, there will be recovery : the Lord of the afeendant in reception of the Lord of the eighth by Houfe or Triplicicy, the For- Uincs afiilting either with their A or the degree afeending or of the fixt houfe, or the 2) her felfe, there's no danger of death, but the lick will perefe&ly recover ; fo alfo, when the Lord of the afeendant (hall happen to be a benevolent Planet, and pla¬ ced in the firfl, tenth, eleventh, fife or third houfe, being no wayes endangered by the G or cP configuration of theMale- volents, it prenotes fanity : fo doth alfo the pofition of the Fortunes in the Mid-heaven or firfl houfe, at what time the fick- nefie fi.il afliulced the ficke perfon, nothing is a morefure argument of health, or tint the party lick fhall live, then when you find the ® X 9 or the 2> in the afeendant ot the Qiiefti- on, not any wayes damnified by the hateful! afpeft of the Lord of die eighth or lixt ; and th*s argument is more certaine, if the aforefaid Signifi editors be in good Signes, that is, in either of V his houfes, or in s or SI, or b : when the Moone is in

her owne houfe, or in the houfe of % or <? , and there in either of their afpt ft, free from any ill afpe& of h or <$* > ilie fignifie health and life.

Ids a good argument of recovery, when in your Qjieftion yon find th e Moon in 6 with V , let V be in what Signe he will it denotes good, but Idle in v? then in any other Signe, for neither the Moon or % have any delight therein, that Signe b e'iig > he Fall of % and Detriment of the Moon 5 in very deed, no Pftaet delights to be in the Signe wherein he ¥ als, or is he

Tne Moone helps that Planet, or lends affiffance to him,be he good. or bad,to whom file applies.

To him therefore that would either cure the Sicke or heale the Lame, the pofition of Heaven ought to be well coufidered and knownc, fet or ere&ed for the houre of his firft falling lick, or lying downe; the Planets and their refpedtive diipofition and mutiiall habit to and amongft themfelves, is carefully to he relpefted ; for without the congreffe and influence of thefe in humane and worldly affaires, nothing is either infirme or found No Patient can polTibly be cured by the induftry of his Phyfitian, be he never fo learned, without the benevolent con* figuration or the Stars, and happy pofiture thereof, bnt he fhal either perifh, being deftitute hereof, or recover and be prefer- ved by their kinde influence.

judge that the beaft you feek for fhall be found and taken. But if the lord of the feventh be an lnfortune, and the 3) infor- tunate, the good planets falling from her, after much fearch fomething (hall be found , and little (hall be taken, and that with wearineffe of the body; which (hall be the truer, if the lord of the afcendant be T? , and in the feveuth houfe a figne of four footed beads. Of ci Law-fuit or Controverfie betwixt two, who flail flecd beft , or * * whether they flail compound , or have the matter taken

up or not before they doe goe to Law*

Behold the afcendant, his lord and }> , thefe fignifie the que¬ rent ; the feventh houfe and his lord are for the Jdverfary.

If the lord of the afcendant or the 3) bejoynedto the lord of the feventh, or be in ^ or A afped with mutuall Recepti¬ on, the parties will eafily of themfelves accord, and compofe all differences without mediation of any, or with a little en¬ treaty.

But if one receive the other, and he that is received, receive not the other Signifcator , they fhall agree without Suit of law, but not without intermillion of a third party or more; and thofe that intercede, for the moft part (hall be his Friends or Acquaintance that did receive the other Planet.

I If they, viz. the lord of the feventh and afcendant are in a □ afpeft, or in cP , with mutuall Reception, or in a or A without Reception, they will be reconciled, but firft they will have one little combate at law : and you mull obferve,that uni¬ ty (hall proceed from that party whole Signifieator is lefle pon¬ derous, and commits his difpofition to the other ; and this con¬ cord fhall be the more firrne, if both Significators receive one another : If the lighter Planet be joy ned to the more weighty, and receive him not, but the fuperiour Planet receive him, it argues, he that receives would accord whether his Adverfary or not. ' Having confidered the former ftgnificators, do you obferve the *7 ftgnificator of the Judge, who is ever the lord of the tenth houfe, and whether he afpeft either of the jignifi-cators, viz . whether the lord of the afcendant or feventh, or be in d with either of them ; fee if the lord of the afcendant haftens to the d of the lord of the fevenui, or the lord of the feventh to him, and that theiord of the tenth houfe doth fruftrate their d , it's then an argument they fhall not agree before they have been at law, and herein the Judge or Lawyer feems faulty, who will not per¬ mit the parties to compofe their differences : fee if the 3> tranf- ferre light between the lord of the afcendant and feventh j if (he doe not, fee if any other Planet carry their influence or light to each other } for if it be fo, it's lLke fome or other in- terpofe their paines, and reconcile the parties though they be in law.

See after this, whether the lord of the afcendant or feventh be ftrongeft, for he whole fignificator is moft powerfull, ought to have the vi&ory ; he is flrongeft, who is in an angle, and in fome of his eflentiall Dignities ; the greater his ftrengthis, how much greater the eflentiall Dignity is wherein he is 5 and if he be alfo received by any other Planet, it's an argument that party is able, and that he hath the more Friends toaffifthim: if you doe find that they will compound, the firft mover there¬ unto, will be on the part of the lighter Planet, who commits his difpofition to the other ; for if the lord of the afcendant be more light, and the lord of the feventh more ponderous, the firft motion of peace fhall come from the querent , and fo e contra - rio : A Planet in a cadent houfe is more weak, if not received or afiifted by the afpeft of fome other * if the lord of the feventh houfe be in the afcendant, then the querent, without doubt over¬ comes, and the Adversary will yeeld j the like happens to the querent , viz . that he fhall be overcome : and this happens not W*herih onely in law Suits , and for Moneys , but alfo in Fights, the fame Duels and Warre : fee further if the lord of the afcendant or fe- diti venth be retrograde , for if the lord of the afcendant be retro¬ grade, it argues the weaknefle of the querent , and that he will not ftand to it ftoutly, that he will deny the truth to his Adver - Jary nor will he beleeve that he hath any right to the thing in

qaeftion ; if the lord of the feventh be retrograde, it argues the fame things on the quefitea's part.

Behold the fignif cater of th tjudge who is to give fentence in the Caufe wch is the Lord of the tenth houfe,whether he be dirett, and behold them,for then he will proceed according to order of law in the Caufe, and will endeavour to (horten and determine it ; but if he be Retrograde, it's an argument the Judge will not 2oe on or proceed according to order of law, nor will he care to end it ; nay it's rather probable he will prolong it a longer time -then he ought by law : judge the fame if the Lord oPthe

afeendant be feparated from the Lord of the feventh, or the

Lord of the feventh from the Lord of the afeendant.

See if the Lord of the afeendant be in afpeft with the © or I j> or either of them joyned to him, fo that no other Planet hinder their afpeft, beware it be not a corporall e! , for that fignifks an impediment, unlefle the Planet were in the heart of the © , for then the Planet was fortified thereby ; fo is he in like nature, if the Planet be in either of the houfes of the Lumi- rnries, or if the © and J> be in the afeendant, thefe argue the potency of the querent : if the Lord of the feventh be dignified or qualified as before I mentioned of the Lord of the afeendant, you muft judge in like nature on the behalfe of the que filed : If the Lord of the afeendant be joyned to the Lord of the tdnth, he that is the querent will acquaint the Judge himfelfe, or make nreanes to acquaint him with his Caule, and it may be he will endeavour to bribe the Judge , that fo he may judge cn his fide : if the lord of the tenth receive the lord of the fecond, the Judge will have Money for his paines ; but if the lord of the tenth re¬ ceive the lord of the afeendant, the Judge hears the querent's im¬ portunities, otherwayes not.

If the lord of the tenth be more light then the lord of the afeendant, and joyned unto him, he will doe the querent's jbufi- neffe, though he never fpeak unto him ; if the lord of the it- cond be joyned to the lord of the tenth, then the yddverfary makes meanes to the Judge ; and if the lord of the tenth receive the lord of the feventh, he will affift him ; but if he receive the lord of the eight, he will take his Money.

If the lord of the tenth receive both fignificaters the Judge

will

all manner of Qyeftiens. 37^

Will compote the matter ere it doe come to a full Tryall.

IftheLordof the tenth be in the tenth, in his owne houfe, the Judge wiil then doe juftice, and judge the caufe for his ho¬nour, unlefle that Planet be T? : if the Lord of the tenth be on¬ly in his owne Termes or Triplicity, it's true the Judge will de¬termine the Caufe, but makes no matter which way it goes, if a Planet be in the tenth houfe that hath no dignity,or is not in Reception with the Lord of the tenth,it argues the parties will not be content, or ftand to that Sentence, they both feare that Judge, andhadrather have another Judge his Sentence, with which they would be content : if h be Judge , he will not judge as he ought ; if at that time V 5 © 2 or J be in any afpe& to - Tj but <f , the Judge will be ill reported of, but in a little time will be cleered, and the afperfion taken off ; but if any of thofe be in <P to T; , there will goe a hard report on the Judge for that his Sentence,and it will continue long ; the Judges defama¬tion will be great if d" be in cP to h , unleffe cf be with h in v then the fcandall will be the leflfe.

But to be (hort, in thefe like Judgments obferve this me¬thod ; the Qjierent is fignified by the Lord of the afeendant, the Adverfnr) by the Lord of the feventh, the Judge by the Lord of the tenth, the end of the matter from the Lord of the fourth ; confider well the Lords of the houfes, their Fortitudes, and whether they be in Angles, Succedants or Cadents, f oitunate or not Fortunate; for the Planet that is molt ftrong, andbeft pofited, is the beft man, and moft likely to carry the viftory, and hath the beft Caufe.

If more Planets be in the afeendant and fecond, the i iuerenl fhall have moft Friends, & fic e cimtario : if both Signifi caters give their vertue to one Planet, there will be one who will in¬tercede betwixt them : if the Signe amending and feventh be feed both auerent and auefued are refolutely bent to proceed in Sit or Controvert ; if movable Sign- s be there, it's like

they have no great ftomack to the bufinefie, but will end it very fhortly ; if common Signes be there, they will continue the Suit lon^, and have the Caufe out of one Court into another ; on whofe part yon find the Jnfortunes, that party (hall receive moft prejudice, forrow and trouble by the Contention.

If an Informe be in the fourth, the place where the Warre is like to be, or where the Armies may engage, is like to be unfit r for the querents Army : if it be mountainous, the places are rough, inacceflibie not habitable, full of Woods, no paffig-e for Armies; if the place feein to be deferibed moyil, ii'smiery, dirty, full of (landing waters. . If a Fortune be in the ten dr, or eaft his ^ or A thither, it's an argument, the Commander in chiefe is a difereet man, un¬ derhand^ what to doe in his place, and that the Officers of the Army are expert men, every one in his place being capable of what he undertakes : but it T? or y be therein, or c? , any waves unfertuuate, the Officers and Captaines are very ailes and buzzards, have no judgment, fimple Fellowes, the whole defigne is like to be over thro wne by their knavery, and want of difcretion and judgment j I meane, the greater part of the Officers, See. they are more fit for hanging, then to Com¬ mand.

If a Fortune be in the eleventh, it ffiewes, the Condudors of the Army are men of good difcretion and found judgment, ex¬ pert men in the art of Wan e, know how to command and or¬ der their affaires, are valiant andcarefull, and underhand in every particular when to charge or retreat ; in a word, the Officers feem men of approved integrity and judgment.

forely repent of her folly , and fo cburlifi a carriage , wiping fie mig againe have former opportunities . This was her condition at what time flie propounded the Queftion unto me.

The afcendant and 0 are for the querent ; T* Lord of the fe-~ venth, is for the man quefited after. The querent was moderately tall, of round vifage, fanguine complexion, of a cheerfull,mo-deft countenance, gray eyed, her haire a light browne,occalio-ned, as I conceive, by 0 Lord of the afcendant, in the Termes of d , fhe was well fpoken, and fufficiently comely.

Finding F in the angle of the South, and in d with <? ,. and both in <5 , a fixed,earthly Signe, 1 judged the corporature of the quefited party to be but meane, and not tall, or very handfome, his vifage long and incompofed, a wan, pale or meagre complexion, dark haire, or of a fad, chefnut colour, curling and crifp, his eyes fixt, ever downward, mufing, ftoop-ing forward with his head, fome impediment in his going, as treading awry, &c. [this was confejfed.'] Finding F fo, as above-faid, elevated, and in d with d , I judged the Gentleman to be-fid5angry,much difcontented, and fcorning his former flights,, (as ever all Saturnine people doe ;) I judged him much incenf* ed by a Kinfman or Gentleman of quality,fignifiedby d , Lord of die third, in part, from the feventh, and of the fourth, being the tenth from the feventh ; and that this Gentleman and he lived either in one houfe, or neer one another, becaufe both ftgnificators are angular and fixed, [andfo it was.’] I faid,the Gen¬

Gentlemans meanes and procurement the matter was brought on againe, the Match effected, and all within twenty dayes following, to the content of the forrowfull (but as to me unthankfull) Lady, &c. In J^rohgie^ the true reafon of this performance is no more then, firft, an application of the two Significator* to a ^ , viz. the Lord of the leventh and firft : Next3 the application of the 2> to the Lord of the afcendant, though by & 5 yet with Reception, was another fmall argument ; but tS maine occafion, without which in this Figure it could not have been, the application of V to of h Lord of the feventh,

IT was the received opinion of Mafter Allen of Oxford , a man' excellently verfed in Aftrologie, that the true Signif <tor of a Tbicfe is that Planet who is in an angle or fecond hot* e, and beholds the feventh he ufe : if no peregrine Planet be in an an¬ gle or the fecond houfe, then the Lord of the feventh fhall be Significator of the Tbiefe , if he behold the feventh houfe : other- wayes that Planet to whom the]> applyes, if he behold the fe- venth houfe; the rather, if the 3) leparate from the Lord of the afeendant. STth the Clergy are as Covetous and vicious as other men., I give them leave to make their demand as well as others, provided alwayes, it be not to hinder themfelves from enjoy¬ ing a lufty Benefice, or impeach them in preferment $ if there¬ fore the Lord of the afcendant who is fignificacor of the Mini- fter (it matters not whether he be Proteftant, Presbyter or Papift) that would haye a Church-livings or other Ec:Iefiafti- call preferment) or or both be joyned to the Lord of the ninth, who fignifies the thing fought after, viz. a Benefice : for if the Lord of the 9th be in the 9^, or behold the houfcr, it ar¬ gues the Gierke or Prieft fhall obtaine the Benefice defired, but with labour and induftry, and his owne very much paines ta¬ king, which I confeffe they doe willingly ; but if neither the 3) or Lord of the afcendant be joyned to the Lord of the ninth, or he with them 5 fee if either the 3) or Lord of the afcendant be in the ninth, for that argues the attaining of the thing fought after : if he be not Retrograde, or otherwife unfortu¬ nate or Combuft, or in □ afpeft of an infortune without re¬ ception, for then it argues a deftru&ion of the matter after it feemcs to be in a good forwardneffe, or neer accomplifh- ing ; but if the Lord of the ninth be in the firft, whether the

Lord of the firft behold him or the 3) or not, in what condi¬ tion foever the difpofition of the Lord of the afcendant or the 3) are in, or if the Lord of the ninth be the lighter Planet, and apply to the Lord of the firft, it's a pregnant teftimony ofpro- curing the thing fought after without much Peeking on the querenfs behalf.

The Lord of the afcendant in A or ^ to © or % , and ei¬ ther of them in the afcendent, argues the acqhiiition o* the Be-

The

The cf of the Lord of the firft and ninths or their afpe&s, frith Reception, gives the preferment without bribing, freely, perhaps upon a detert or merit ; for fome of that Tribe are black Swans : IF theafpeft be by □,* it comes not fb lightly j yet if Reception be, it comes at length, perhaps a fifh with Isprcfented to the Patron*

After this, fee if any Planet transferre the light of the Lord of the ninth to the Lord of the afcendant, the Benefice is ob¬

tained by fome interloping perfon,unleffe the more ponderous Planet to whom the Trariflator doth afford vertue, commit that influence to fome other Planet, and that Planet have no fignification in the Qjieftion, for fuch an aftion intimates de- ftruftVon of the matter, after it is hoped to be neer pcrfe&ing ; If the Lord of the afcendant haften to the c f of the Lord of the ninth, and meet with no obftru&ive afpeft before, it*s not then to be doubted but the Furfon obtaines his preferment, but not without much folicitation : many Planets Significators in this or the like Queftion, either many Competitors in the thing, or many contentions and much labour to obtain it.

Lord of the afcendant in cf with an Infortune , and he not Lord of the ninth, or in Reception with him, or not commit¬

ting his difpofition to any Planet who receives the Lord of the firft or the £ , the matter will not be performed : If that Infor- tune commit his vertue to any Fortune , who is ftrong in the FL* gure, the thing will be perfefted ; for the cf of the Infort unet without Reception, performes nothing ; with Reception, they performe with difficulty : a Planet fignifyihg the effe&ing of any thing, being pofited in an angle ; haftens the matter, in a fuccedant, it retards the thing ; in a cadent, quite deftroyes the matter? or fuddenIy,beyond expe&ation,when all men defpair, by fome fecret trick, perfe&s it; but this is very rare.

If any malevolent Planet afpeft the Lord of the afcendant or the 2> with □ or cp, without Reception, the querent feems much troubled, is difpleafed with the manner of profecuting the matter, and beleeves he is either negligently or knaviffily dealt withall, by fuch as endeavour to negotiate in the matter z If the Lord of the firft and ninth both of them commit their dif* pofition to any Planet, by whatfocver afpcft,who is not impe-

and the Lord of the tenth be in the afcendant* it argues ob¬taining of the Office with eafe and facility : If the Lord of the tenth be joyned to c? or T? * and they or either of them in the afcendant, in their owne houfe or exaltation* and themfelves Orientall and Direfr* and not one oppolite to another* this doth argue obtaining the Preferment* though with much importunity.

If the Lord of the tenth receive the Lord of the firft or the }> by any reception* or in any houfe* the matter will be effected with much content and profit.

If any Planet transferre the vertue of the Lord of the firft to the Lord of the tenth* then the thing will be perfected* or Of¬fice obtained by meanes of another that labours in the matter* and not by himfelfe : In this cafe* it’s beft that he who would

Behold if any of the preceding Planets be in the firft, or in the tenth ; if he be a Fortune , it notes obtaining the Dignity, whether he be in Reception or not : if the Plane t fo pofited do receive the > or Lord of the fir ft, the matter will be petfefted, blit without Reception, not.

If the tenth hotife be the houfe or exaltation of that evill Planet, and he placed in that houfe, he performes the bufineffe,

whether he receive the Lord of the afcendant or the 3) : In eve¬

$ 5 to Saturday , T? : and the firft hour of every day we affigne to that Planet affigned for the day, beginning at Sun-rife ever, the fecond houre we give to the next Planet, the third hour to the third Planet from him y as if upon any Sunday I would know what Planet governeth the firft, fecond, third, fourth, fift, fixt hour of that day, I fay ® governeth the firft, 9 the fecond, 5 the third, D the fourth, T? the fift, y the fixt, &c. and fo in order fucceilively during that day and night fubfe-quent : and if you account in order, you (hall find by this con-tinuall account, that 7> fals to rule the firft hour upon Monday $ Tj the fecond, % the third, p" the fourth, 8cc.

It is very true, fome of the Ancients have Winter and Sum¬mer, made the day and night to confift of equall hours, I mean every hour to confift of fix ty minutes equally 5 but Attrologians doe not fo, but follow this method, viz∗ according to the mo¬tion of the ® both Summer and Winter, lo doe they vary

their hours in length or fhortnefie 5 fox all that fpace of time which is contained from Sun rife to Sun*fet, they divide into twelve equall pars, whereof the one halfe containcs the hours before Noon,the reft the hours after Noon 5 fo alfo,what Ipace of time is from Sun-fet untill Sim- rife againe the-mxtday af- ier, is equally divided into twelve parts 5 whereof every twelft oart.containes the fpace or time of one hour Aftrologicall ; md we doe ever begin to number from Sun rife, and continue until! the next Sun-rife,accounting 24. hours, beginning ever- jnore at Sun-rife, with that Planet who b affigned to theday.

all manner of Questions.

‘Z/'/e of the ’talk.

In ere&ing a Figure by the Tables of Reg/owotftew/tfjthis Ta¬ ble will.be of good ufe : you muft -underhand that one hour makes fifteen degrees in the Equator , two hours thirty degrees, Sec. and that one minute of an hour makesiifceen minutes in the M quator, two minutes thirty minutes of the Jj Equator .

The ufe you are to make of it is thus ; in ert&ijng your Fi¬ gure, you muft convert the hours before and after noon int® degrees and minutes of the Mentor, and this is called vulgarly right afeen't ion of time: thefe degrees and minutes you muft ad de to the degrees and minutes of theRight afeention belong¬ ing to the ©, and then fee what, degree of theEcliptick an- fwers unto them in theTable of Rjighb*afeen tji ons,& that is the

cufp of your tenth houfe : 3 would know the cufp of my tenth houfe by this manner of operation, for a Figure erefred at 3. 25. F. M. Saturday the 12. of June z6& 7. the place of the® at that time is o. -51. 23, but t will take one whole degree ; look in theTable of Right afeentionsmnder 53, and over againft the firft degree thereof, - which' you find j» the firft Co¬ lumn and under <5, 91. degr. and 5. m*jj> to be the right afccn- tion of the © whe 1 he is in the firft degree of 23 .

In the Table above, you may fee three hours give me me 45. degr. of the JEquaior, under the tide of mivuies of tours, I enter with 25. over againft it I find 6. dcjgr. 45. min. of the JEqnator .

If I add unto 142. 2o.\vhich is the right afeention tof the Mid- lu av n, co. degr. J** 30 there arifeth 23c. 20. vvith which

if you eiuerir.to the Table of Obliqne^afctndons following, helpnging to 553. degr/of latitude!, it will pjoint you out the _ _ _ r . degree

degree of the afcendant, for that Elevation $ you cannot find 230. 20* your prccife number, but againft the 5* of H. ^ Ihicl 23,0. 52. vesy neer it * which being more tfien liiy number, I mu ft take a proportionall part from the next letter Ark : But of this hereafter. So that my afeendan t wall be four degrees and more, not fully five. I have purpofely inferted tilde four Ta¬ bles following, to inftruft the Learner how he may ere& a Fi¬ gure of Heaven by Jxcgi oiitotit ahim $ which he ought punctually to doe upon a Nativity, but in ordinary Queftions its more (crapulous, then need is : what I have done now, is onely to initiate 5} rocs that they may apprehend a little : I (lull performe the following example exaftly to minutes 5 if you will make no ule of the Table, then multiply the hours given you by 15.. and divide the minutes of your hour by 4. and this way alfo converts the vulgar hours into degrees of the JEqua- tor * either are fpeedily performed. However, you fee the cufp of the tenth houie is gamed onely by taking the Right afeenti- on of the time, and adding it to the Right afeention of the •: ^ ^ if more then 360. remaine, caft away 360. and enter with the remaining number the Tables of Right afcentioji, and what degrees of the Ecliptick anfwer thereunto, thoft.fhall be the cufp of the tenth houfe. .

$ oo An Introdn&ion to Nativities.

Chap∗ XCV-III. .

HE that would Judge∗ upon the future a&ions 2nd contin¬ gencies depending upon the influences of heaven in a Na¬ tivity, if is neceflary that he have in the firft p?ac the place of the Planets, viz. their Motions exa&ly caicu atcd^reftified∗ and fitted for judgement, according to the Modern? and beft approval rules of Art j that is, he ought fiift to let Ms Figure according to thc cftirpaiive time 'given unto him 5 and then to

confi-

confider whether that be the true time of Birth yea or not, left he be deceived either wholly in the Signe afcending, or by a fallacious and uncertaine houre miftake many degrees thereof,

1 viz∗ either in having few or no degree?, or the latter part of arty Signs afcending •, by which errour no cert tine or rational! Judgement can be given, either of theComplexion,forme,con- ititution or fortune of the Native. The Ancients for folving this error and amending the time, have delivered fome wayes and meanes unto pofterity, whereby the iuppofcd time of ones Nativity might be rectified and brought to its true and perfect • time v whole Methods I will now deliver in the firft place,and then declare what or which of them, I hold mod lit for the Student, and ought to be followed. The firft way then of re¬ ctifying aNativity, and reducing it to that moment of time when firft the Infant was feperatcd from his Mother, and re¬ ceived the breath or ayre of this world, was by the Trutine or Scrutiny of Hermes (one of the wifeft of all mortall men, and as ancient as Meyfes') and this way is farre more ancient then | the Animodar of Ptofomey , allowed by Ptolomey himfelfe in his 51 . Centiloqttium (if that be his) as I undoubtedly conceive it is ; his words ar Sign e the Muon is in at time of the birth , m^kj that very Signe the afcendant at Conception ; and what Signe the Moon? is in when the Child? is conceived, make that Signe> or the oppofite wi to it the Signe amending at the Birtby&c. For Hermes was of this opinion, that the very degree of the fame Signe wherein the- D was at the conception of the Ghifde, ftiould be the true de¬

gree ofthe afcendant at the Birth. This manner of verificati¬
on, though it is of great ufe and much experience, wiil not in
many examples hold firme not to a degree two or three,all the
ufe I ever have or could make of it, was, that when an uncer-
taine time was given me, or the time miftaken by an houre or
• two, it would helpe me to the Signe afcending, but rarely to
: the degree afcending or ireer unto it 5; yet doe l know Junfiin?'

e ! doth infift much upon it, and produces many examples verifi-
!, r cd by it, which did concur re with the Scheames of heaven cor-
it refted by Accidents * many Authors alfo had a good opinion
e of it as well as h t^viz. Schoner^ Pont anus , Sir Cbriffopber Hey c

An Introduction to Nativities. § ©cj

Children, I leave to the judgment of, See. This Nativity is
precifely rectified by Accidents , both, by thofe depending upon
the Directions of Medium Cedi , and of the afeendant to their
refpe&ive Promittors.

Some have delivered a way to find out the hour of Conccp-
tion, but I hold it a matter too nice fully at this time to be
handled, nor give I any credit unto it : yet it's thus.

You muft take the l ight afeention of the 0 for the Noon

birth, of the l under the elevation of the Pole whure the Birth

in the Signe he is in at the conception. Take the time from
Noon over againft the place of the D in the birth under the

Ascendant. Subftraft the houres correfponding to the place of the 0 in the io. houfe, from thofe an (Wering the place ofthc ' }) in the afeendant, by adding 24* houres, if need be 5 what remaines, is fuppofed to be the time of the houre of Con¬ ception.

Chap. XCIX.

Of the ReFtifieation efa Nativity by Animodar . 7

MAny and thofe very learned, doe at this day ufe the cor- re&ion of the eftimative time of birth by this way of Animodau

When you have ere&ed your Scheame of heavep as neer as you can to the true efdmative time, Ptolomey direfts you to confider diligently the degree of the Signe wherein ^thelaft new Moone was before the Birth, or if it was a full Moon,the degree of that Signe wherein either of the lights that was a- boYe the earth was in. nioft dignities., viz. effentiall in that degree ; and if the de¬ crees he is in be neerer to the degrees of the cufpe of the afcen- daRt then to thecufpeof the Mid-heaven, place fomanyde-' grees afcending as the Planet is in the Signe who rules the de¬ gree wherein cither the new I) or fiili was , but if his de¬ grees be neerer the Mid-heaven then the afeendant, make the degrees of the Mid heaven the fame his are, and fo vary your

former figure according to cither of thofe Angles; but if it

happen fometimes two Planets have equall dignities in the degree aforefaid,accept of him who is neerePt i t degrees to the Afcendant, &c. Though our Nativity was re&ified by acci¬ dents, and fo needs not this way of re&ification, yet for illu- ft ration thereof we will examine whether the verification hereof by An hinder will concurre with what is verified by ac¬ cidents ; for the eftimadve time given me at firft did not differ

from the true and cor reeled above one degree in the afcendant.

being neerer to the degree Afcending then of Mid-heaven, the Afeendant by this corre&io 11 ought to have been the ninth of v? and 2. min. but had we accepted of 9 to have mod digni¬ ties, as fome would have done, you may then fee a ftrange concurrence. I have onely delivered the way of this manner of emendation of the Horofcope by that Method which is cal¬ led AAmodar, but neither the Twine of Hermes^ or this, are of fo fare foundation, as that Corrc&ion which is performed by Accidents. But when we fet Childrens Nativities before . any accidents happen, we ufc this way and the other.

ffle Rettificatioti of ^.Nativity by Accidents , and f ranting - of an Aftrologicall Speculum.

SOme give rules for the re&ifying of a Nativity by the 7 'ran* fits of the Planets upon the principal! Hylegiacall places of the Nativity ; others by a figure of Projections directing there¬ in the afcendant and Mid- heaven to their ? remit tor s : were there any certainty or affurance in either of thefe wayes I

would prefcribe them ; but as 1 could never finde any verity or probability in either of thofe two wayes in my pra&ife, fo doe I leave them to any who are deiirous to pra&ife them,and give directions to perufe Crigaim page 380. and John Scbonar who magnifies the latter of thefe wayes by the rectification of his owne Nativity, and Pezelius Page 22 6, 8cc. which Au¬ thors doe declare the praCticall part thereof to thole deiire it, &c.

He that would re&ifie a Nativity exa&ly, mu ft performs it by luch Accidents as have already happened to the Native, be¬ fore you handle his Nativity ; and to that purpofe he muft colled in readineffe fo many as poflibly he can procure, and thofe eminent ones, together with the certaine time, viz. the yeer and month, and if poffible the day when they happened, but the moneth and yeer will well ferve, if no neerer time can be obtained j for fometimes we are infoi ced to accept of the yeer without the moneth. The quality of thofe accidents ought to be either fuch misfortunes, fickneffes, or cafiiakies as have happened to the body 5 and thefe are to be expe&ed from the Afcendants occurfe, progreffion,or meeting with Malevo¬ lent Promittors 5 wherein you muft confider the afcendant being the place from whence we begin our worke, is called in this worke the Significat ory as fignifying fuch or fuch an ac¬ cident or ficknefie fhall chance unto the Native, the Planet di¬ rected unto either by body or afpeft, is called the Promittor , and he fhewes the greatnefle and quality of the accident or fickneflfe, or promifes to performe what the Significator de–

S f C 2 dared

dared was to come, 8ccj The Medium Caeli is another Signifi– cator, and we direct him to his feverall Promittors for ho¬ nour, Preferment, Marriage, 8 cc. and verily a Nativity can¬ not well be rectified but by Accidents belonging to the one or both thofe Angles* The ® in every Nativity is a principal! fignificator, fo is the 2> and ® , yet a fufficient re&ification from thcfe cannot be had : thefe five are called the Hylegiacall or principall places of the Nativity 5 by dire&ion whereof moil of the affaires and contingencies belcng’n^ to every man

or woman in a naturall courfe of life are found out, both in qual'ty What, and in meafure of dm? When.

Thebeft Method! doe know, and which I havepra&ifed jny felfe, is, firft upon the efumative time to draw a Speculum, . and therein to place the Planets and Cufpes of the houfes ac¬ cording to the eftimative time, having c re to rt&ifie the place of the }> to your faid efrimated time : frame your Speculum a* followeth 3 and let it .confift of fo many lines as you fee*.

•$ i o An Introduction to Nativities .

Haring framed your Speculum , you niuft place the chara&ers of the twelve Signs in order as you fee already done in the firft or upper line of your work : the firft column on the left hand where you find Deg. and Min. are the (everall degrees belong¬ing to the Signes and houles, where you find a fecond number, it notes minutes adhering to the degrees.

Pirfi, you muft in every Signe, place the Tcrmes of every Planet in their proper degrees, as you find them in Tag. 104. as under T over againft o. 54. you find t ¥ , it tels you the 1 ernis of V begin with no minutes of T , the 54. minuets do adhere to c? , as by and by (hall be declared : then under Y' over againft the feventh degree of T 5 you find t $, which tels you, that the Termes of 9 begin in the ftventh degree of T : over againft the fifteenth of V you find t 5, which fignifies the Termes of $ begin there : over againft the 22. of T , you find t J , viz. <? his Terms begins at the 22. of T : over againft the 27 of r , you find t 7? , viz. 7? his dominion in Terme be¬gins at the 27. of T , and continues to the end of the Signe. You niuft underftand,that in what degree onePlanet beginshis Tcrme,there the former leaves his power,and the other conti¬nues his venue untill the next fucceeds. And here I muft ob- ftrve and give you notice of a vulgar Errour committed by all or moft oi the Aflralogians , either late living, or at prcftnt now alive ; that is, in directing a Significater to the Terme* of any Planet, they mihook commonly one degree, as for example, had they been to have direded the 0, who in our Nativity is in 6, 37. , to the Termes of y 3 they did ufually in A place

y in the eleventh degree thereof, whereas he hath no Terme in £5 until 1 he come to the twelft degree thereof 5 for the firft fix degrees of & , are fully belonging to 7? , from the end of fix, or the ieventh, eighth, ninth, tenth, eleventh degree of

are the Termes of 2, and then y enters, viz. at the twelft:

degree.

Having placed the Planets in Signe and degree in your Spe¬
culum, you muft know how, and to what parts and degrees of
every Signe they call any afpeft, both forward and backward,
or direct and converfe, or according to the fiucceflion of Signs,
or contontrary unto it : as for example 5 in our Figure you

gions of this Nativity, the Smifextill,Semiquintil9Semi quadrate,

but not placed in the Speculum 5 you muft know, the fmalndie
of one fide of paper would not contain a Speculum 01 that large,
nefife wherein 1 could have inferted their characters; butbe-
caufe in Directions there will be frequent tue of knowing
how to put them in amongft other afpeCts, you mult doe thus \
frame for your private ufe a very large Speculum, wherein make
pood great fquare columns, and therein you may place the
characters oi the new and old alpeds as occafion ferves,and 1 af¬
terwards you may draw them into what forme you will .
how to per forme and goe on with the work, is readily thus ,

Of the jfracc of Life3 or whether the Native it likg to

live longy or not.

BEfore you proceed to any particular Dire&ion of the five HylegiacaU places, you ought generally to eonfider the ftrength of the Politure of heaven, and therein whether the degree afcending, the Lord of the Geniture, the ® or D , or the light of the time are extreamly afHi&ed,&c. for thole ar¬ gue no long life : it were therefore in vaine to frame long Di-

re&ions upon that Nativity.

However, that which is principally confiderab!e,and ought if poffible to be obtained, is, judicioufly to examine the Nativities of the Parents of the Childe, and whether the Signified ∗ tors of Childrenin them are ftrong yea or not; for as the goodneflfe of fruit depends upon the temperament of the root, fo alio Children, whole Parents have unfortunate Significators y> doe" dye upon a final! fickncffe, &c. but lith they are not ufually attainable, you may proceed according to the Method j following :

Firft, eonfider thedegree afcending, which moft properly hath Sgnifieation of Life, whether it be fortunate or not ; its then fortunate when in the termes or ligne, or in the or A of a benevolent Planet ; and fo on the contrary unfortunate , , when either locally an in fortune vitiates the degree afcending, or by his □ or <P afpeft ; or when many violent fixed Starres of the nature of the Lord of the eight, doe arile with thedegree afcending, or are with or neer the Luminary of the time∗ If according to thefe Fules you finde the Alcendmt fortunate, the Childe may live paft his infancy ; but if affli&ed.he hardly elcapet hisver / infancy.

Secondly, the Lord of the afeendant is to be confidered, for if he be Eflentially ftrong, free from Combuftion, Retrograda- tion and affi^fion, fwifo in motion, not afflifted by the unhap- ∗ py alpefts of thole Planets who are either naturally unfortu- , nate, or accidentally by polition, viz∗ if they be not impedited by the Lords of <;heeighthi twelft, fourth or fix&hou6& it‘

Thirdly, have fpeciall regard to the ® and 3), Specially of the ® , if the Birth be by day 5 or of the 3> , if it be by nig for if either of thett be ftrong and well dignified, or in a good

houfe, and in a favourable afpeft of either of the Fortunes y k*s an argument the Native may long live * if otherwile, they deny long life : for it's generally oblerved, that when the © and > are partilly in d with the Infartunes , that then they are very unfortunate , nor for the moft part doe thole who are born ei¬ ther upon the veryChange or fulMive long, or continue health- full 5 for they who are borne upon the full 3> , dye by excefle, or too great abundance of moyfture b they in the change of the i 3 3 for want of humidity, or by realon of too much drincfle : yet the weakeft bodies, moft fmall and moft fickly, are ulually brought forth upon the change of the 3> . However, the Anti~ ents doe Cay y that \f the Luminaries are in partill of or cP, even to a minute, and a Fortune , viz . an Edate by dire$r or lawsuit courles, as alio, by indire^ and unlawful! meancs ; judge the fame, if the benevolent Planet be Com bud or Retrograde.

The fame manner of judgment fhall you give if a malevo¬lent Planet be Significatoro£ anEdate,and placed in dignities of a Fortune .

If a malignant Planet by nature is Significator of Wealth, and conftituted in the Dignities of the Fortunes, and yet not- withftanding (hall be Retrograde or Comhud, becaufe that

then the eviil is conduplicated, the Native (hall attaine more of his Edate by unlawfull or indirect proceedings, then by lawfull or warrantable.

On the contrary, if a good Planet be in the Dignities of the Infortune s^ Retrograde or Combud, the man thrives more by unwarrantable meanes then otherwife.

So that you fee this judgment depends upon four Confide-rations.

Fir d,j™ro the nature of the Significator, whether good or evil!. Secondly, from the 'nature of the Signe he or they o ccupy .

Thirdly, from his or their being or not being Ccmbuft.
f ourthly, from being Retrograde or not Retrograde , for accordingly he

The two Infortunes pronounce debility in hearing, efpecial- ly T? , if he be in the termes and houfe of 2 , who principally governeth Aery motions and affections, and this efpecially when T? is lo pofited and in the fixt or eight houfes : From hence we judge, if 3 be Lord of the fixr, and unfortunately placed in the afcendant, and T? behold him with □ or cP, or elfeif T? beh >Id the fixe houfe with c P, the Native will be deare, or much defe&iv*. in his fence of hearing : if the Lord

Of the 'tooth* ach and Uufe thereof , from the Signified

Who hath & in the afeeniant in Hi , its probable he ioofes all his great Teeth. I finde experimentally, thole that have him in $ or X in the afeendant, doe loofe their great Teeth, h combuft of the ® in a watery Sigmas in $ t or K ,fhews great torment and pain in the Teeth * and this more grkvoufly when T? and ® are in the Alcendant or tixt honfe. In any o- ther Signes, he rather fhewes extremity of paine fr om too rre- quent deflux of Rhurnes into the Jawe: without doubt the ppfition of h in the Afcendant in any Signe, except \y or zs is an allured argument of great paine in the Teeth : So alfo when he is in the feventh,for then he is in c P to the afcendant,

I have conftantly obferved, that where T? was in the afcendant in an earthly Signe, except yp, the Native had weake Teeth and diftort, quickly perifliing ; if he were in an Aery Signe, the Native was much vexed with Tooth- ach, but feJdome drew any T ooth : If he were in a Fiery Signe, then excdTe of heat caufed the Tooth-ach, but of themfe'lves the T, eth roted without much trouble or paine, fave onely for a d .y or two.

Of the Falling- ft cknejfe and Madneffe,

You mu ft herein with great judgement confider the Signifi* cators and their feverall mixtures, and un ferftand that the Epi- /ep/k or Falling evi l, is a Difeale which is contract d from perverfe, ill-affe&ed, and contaminated humours, which ei¬ ther vitiate the Braiue with fuperfluous and over-much quan¬ tity* '

You are herein to poyft with judgement all the Significant feelonging hereunto, how they are affe&ed, principally $ and Signet of nc C , if both theft Planets be in barren Signes,7/is. i^n s i ,and Marria alio in cadent houfesi viz. 6* p. 12. 8. (for the eight houfe, though it be not cadent, yet is admitted in this judgement by reafon of its malignancy :) theft teftimonies import either a fingle life, or an averfenefle from Marriage; and if it chance that the other Significant doe herein concur, and that they be in fterill Signes and cadent houfes,the effe&s of the former fig– nifi caters (hall be more manifeft and certain.

If the aforefaid Significant 9 but efpecially 2> and $ are not fo conftitutcd 5 fee then if either of them is weake or little for¬ tified ; and befides that,conjoyncd to T? , he being very potent,

$ her felfe alone, having not the fupport of any Planet by a good afpefr » and if you then finde }> pofited in a barren Sign, or cadent houfe, or cxtreamly affli&ed , theft argues no Marri¬ age or any defire thereunto. . . r

&But in this point of judgment, you rauft ever under ftand,

that h ought to be very ftrong ; for if 9 and the 5 be more fortified then . h –, them the preceding judgment holds not true.

The fame judgment before delivered, will hold of i Angle Life, or unwillingnefle thereunto: when' in a Nativity you find T? more elevated then either j or 9 , no Planet aflifting either of them ; for herein his elevation is equi valent to a d . And this judgment feems to be confirmed with reafon, for j> and 9 fignifie Legitimate Marriages, and the Natives afftfUon to a married life, therfore if either of thefeorboth beextreafnly impedited of T? , the author of Monkery and Solitarintjfc, or of Angle life, it takes away that affeftion of mind which doth

ufually ttir up a defire in the Native to contraft Matrimony. Concubints and private Sweet- hearts ate difeovered by 9 her ■afpe&to h and <f 5 being all of them peregrine or weak,- and In no good afpeft of the ® or 2> : ® % 9 argue Ghaftity 5 9 and<f Impudency and Luft. ; • (

_ You mufl remember this, that the other Sigriificatm of Mar¬ riage are alio to be examined, viz . whether they be in barren Signes or cadent houfes, or Weak and much affixed, and in with and he well fortified t for if the teftimonies of thefe Significant agree with the afMion of 9 &;I> , without doubt the Native will then never Marry : 5 in m , in Q of h , he in aor«; J Combuft of the ® and in p or cP to h ,tf Ihe'be in vy zz or £5, the Native never Marries.

E whole Art of Dire&ions is copioufly handled by Regiomontam #, Maginus , Lcovi - f/W, Manginus^Zo bolus fee* bat moftexqui- litely by Argolw. r, in his Primnm Mobile , un¬ to whom Potienty muft acknowledge themfelvcs exceedingly obliged : It is very true, that before Regiomontanus did frame Tables, Antiquity was much perplexed in dire&ing a Significator which was not upon the cufps of the Houfe, by reafon they had no exa& method for finding out the true circle of pofition of any Planet, when elongated from the cufps of a houfe : they did then direft either by the Tables of

Houfes fitted for the latitude where the Native was born, or by the Vntrnall an dNotfurnall Horary times , a laborious difficult and obfcure way : yet the onely Method Ptolomey left, which is mentioned by Origanums pag. 391- and Argolusy pag. 283. of hi* Introduction to bis Ephemerides , and Maginus, in Canon 55* of his Primnm Mobile 5 Pez>d'm^ fob 186. Garc£in^ 449. Junftinus3 pag.

Chap. CL VII.

How long tbe Effefis of a Direction jballlaft.

THe vehcmency & greatnes o f the effe&s of every Direftion is taken fro the ftrength both of tht Significator and Prmittor9 or their Debility in the Root of the Nativityifor when both of them are in their Effentiali Dignities, and in angles, the effe&s of their Dire&ion ihall be evident and manifeft, and performe fully what was promiled by it : as if the © were directed to the ^ of the 3) , both of them in their Eflentiall Dignities, without doubt upon fuch a Dire&ion, the Native would attain admirable Felicity when ever the Significator and Trominor did meet.

If the one of them is powerful!, the other weak, the effe&S willbemeane: and you mutfl obferve whether the Significator or Fromittor be better dignified 5 if the Significator be more frrong, theeife&s of the Happineffe (hall be without any great or weighty caufe to procure it : but if the Promittor be moft for¬ tified, the Felicity : verily fhall appeare, but not according to the magnitude of the caufe from whence the Felicity had its original. When

Dire&ion will prove accordingly, and the cccalion ofthe Hap- . pinefle promifed as poore ; by how much both Signifiwm and Pwmttor arc more weak, by fo much (hall the Events be lefle

anlwcrable. and the Caufes from whence they fhould pro-

ceede.

If both of them be wholly weak and unfortunate, the c-fre&s

of the Dire&ion may come to nothing, and onely a (hadow thereof appeare, but nothing efiefted.

You muft alfo obferve, that if the Infortunes , being Pmnittors

in any Dire&ions,doe portend an infelicity, or any fad Events, the evils will be more tolerable, and doe lefle mifchiefe : if in the Radix they were ftrong, or pofited in their owne houfes, for they hurt not their owne houfes or overthrow their owne fignifications, and are wont then to doe lefle evill when well affe&cd, then other wife.

It fometimes happens, that in the fame yeer of the Native, there are good and ill dire&ions of divers fignifications,fo that tdie Atfreloger may feem doubtfull what to doe in that cafe ; yet in my judgment there can be no ambiguity therein, for both the Directions may exercife their cfle&s in the fame yeer with¬ out mutual! difturbance of one another, unlefle there be a cer- ' taine agreement or conveniency of them 5 as of the $ and Ho - rofcope, whereof both of them fignifie the Health of Body 5 fot let us admit that the afcendant in the fame yeer comes to the Quadrature of & in a fiery Signe, arguing thereby a violent Fcaver unto the Native, &c. let us fappofe the x> in the fame yeer meets with the ^ or A of $ in a watry Signe, the Quere is, What judgmtnt fbdl be given herein ? viz. ' Of the meafure of time in Directions,

BEfore I handle this point, I muft give this general! Inftru-
ftion to the younger Tonnes of Art, that in judging of the
cffe&s depending upon any Dire&ion, they maturely confider

the age of the Native, for events are to be accommodated unto the difference of times, and therefore one (hould extreamly de¬ ceive himfelfe,that upon any ftrong Dire&ion of theafcendant ormid-heaventothe A or ^ or d of $ or 2> , (hould pre¬ dict Marriage unto a Native that is then but three, four or five yeers of age ; how much, 1 fay, (hould the Artift miffe the mark if he (hould attribute that a&ion to an Infant,of which he can¬ not then be capable ; or what a madneffe were it to predict to an aged man the begetting of a Child, when in reafon it felfe, and by reafon of his extreamc feeblenefle, no fueh thing can or may be expe&ed ; we muft therefore prognofticate things pof- ffble and natural!, befitting and agreeing unto every one, ac¬ cording to the difference of his yeers, &c. We muft al(o in all our predi&ions have the world to underftand, that the com¬ mon or generall fate of any Nation or place, is of more effica¬ cy then any ones particular : we muft alfo confider the Region where any one is borne,if we will exquifitely judge of the (hape and forme of the Native, and of the manners of his Mind, &c« ever confidering the mo ft powerfiill caufe, &c.

But now we come to handle the meafiire of time in Directi¬ ons, wherein there are at this day three (everall Opinions, yet not fuch as doe make any great difference in the matter.- The opinion of Tt&lomey hath continued fince his time untill this lad Age without any contradi&ion ; and it was thus : If you would direct the afcendant in any Nativity, you muft per- form it by the oblique afcentions belonging to the place where the Birth was : the words of Ptolomey , lib . 4. cap. ult . are thefe : Cum autem pwogatio fumitur ab Horofcopo , demur ami gradibm kngitudinii , a quale s tfcenfmibut cujufque Climatk : ftn autm

fumitur prorogatio a medio cceli, dentur ami equates afcenfmibus m:m diti cceli : A ufque ad Cardinem fimili tnodo dentur anmaqnales pro- proportion collati ad af cent tines aut defcentiones , ant tranfitum in midio«caeli, &c. and a little after he faith, pro fengulis gradibus annum tribuentes, &c . He meanes no more, but that the aP Cendant in every Nativity is to be dire&ed by the oblique at¬ tentions of the Climate ; the mid heaven by the right afcenti-

ons ; the meafure of time is by allowing for every degree of the JEquatoro neyeer, for every minute thereof fix dayes, 8tc. In our Nativity, pag. 500. the afcendant is 6. 37, vy , the oblique way

afcention belonging thereunto,in the latitude of $3. where the ofmeJurincL Birth was, is 3 1 2. 1 o, I would know in what fpace of time the ^ ® afcendant (hall come to the Terries of cf , and after that to the cP of cT • ■ *

Oblique afcention belonging to the Terms of c? in 20. v? is 324 5

difference is *

According to the meafure of time by Ytolotney, eleven degrees gives eleven yeers, 55. min. give eleven moneth$,for every five minutes give one moneth ; fo then in the latter end of the twelft yeer, this Native's afcendant came to the Termes ofd" I you may fee what it (hould fignifie if you look in the Chapter ofDire&ions,what the horofcope to the Termes oftf prenotes* .

So then the afcendant after nineteen yeers and ten inoneths and twelve dayes, comes to the <p ofd" •

T’be fecond meafure of time.

Aktonius Maginus, an Italian of lingular Learn¬ ing, and one of the greateft Mathematicians of Europe , was the firft that queftioned this meafure of time, delivered unto Pofte- \ky by Ptolomey, in pag. $ i.of his Primum Mobile , printed 1604* induced hereunto (as he faith) by an Aphorifine of Doftor Dee of London, and fomething elfe gathered from the Writings and opinion of the famous Tycho Brahe the Vane, See, he concludes thus, : That the meafure of time ought not to be taken or dedu-

Vnrj] red

ced from the Ample motion of the © , but from his true or ap¬ parent motion, &c. and concludes. That in his opinion j we o^ght to take for the common meafure of one yeers (pace in the directions of every Significator9 that arke of the Mquator agreeing to the apparent motion of the © at time of the birth according to his right afcentions, and not oblique afcentions of the Region.

The Prattig&*

| Take the right afcention of the © at the houre of the birth, j as if it were at noon $ adde againe the apparent diurnall moti¬ on of the ® for the next day and fame hour,and take his right afcention, then fubduft the leffer right afcention from the greater, and what remaines is the difference of the revolution of the firft mover from the diurnall revolution ©f the © , and fhall be accepted for the meafure of time for one yeer.

In our Nativity, pag. 500. the place of the © is & 37. a , his right afcention is 186. 4. the apparent motion of the © . added to the fame hour of the next day, makes it 7. 3 6. tss , jts right afcention 186.58. the former right afcention fubftrafted from the latter, there refteth as follower

ooq 54

So then here is 54. minutes and no more, and this propor¬ tion of the JEquator fhall be the meafure of one yeer in the Di¬ rections of our Nativity, according unto Magmas: We have added a general! Table, by meanes whereof, without taking ! the right afcention belonging to the ®, you may know that portion of the JEquator3 which muft be had in any Nativity, j for the yeerly meafure of time : I doe the more willingly in- fert this Meafure, becaufe William Bredon9 a late Minifter of the

Church of England , and a Angular Jjirologian9 did wholly ufe i this Method. The Table followeth.

Let us fee by the former example of the Ascen¬
dant unto the termes of d* and cP of , what the
difference will be : you may fee that the diftance of

the Horoscope by the oblique afeentions from the termes of d1 is Ii.deg.55.

If you enter into this Table under the title of de. grecs, untill you finde 1 1 . you /hall finde over a- gainft it on the left hand i3.yeers,and whereas you have 42. min adhering to 1 1 . deg. on the right hand you muft know when 54.min.is the meafure of one yeer> then one min.fhall fignifie fix dayes 18. hours 5 fo then by operation you (hall finde 42. min. give 284. dayes : fo that by this account, the Afcendant did not come to the termes of untill the Native was 1 3. yeers compleat and three qnarters currant in his fourteenth yeer, or thereabouts. The num¬ ber of degrees that the afeendant is difiant from the C P of c^areas abovefaid 1p.degr.52. min.

In this Table 19. deg r. give 22. yeers.

And 48.min.give 324. dayes : fo then the afeen- dant by this Meafure came not to the <p of <y until the 23. yeer currant of this Natives age.

The third and the Iaft Meafure of time which I now intend to handle, was perfe&ed by Valentine

a uvn.Nf!b°ds in his Coment of Ptolomey, but commended and published by Maginus himfelfe, as the more corre& and cer-

tame meafce in his Book drDitbm CM, and in his new Ta¬ bles publilhed i6i9. This Method of Naibods I doe ufe in thofe Nativities where I take or have ftfficient time allowed me for performance oi one ; otherwife, I ufe Ptolmies wav, which is performed without any trouble or intricacy : I prefent thee

You fee here are two Tables, the firft doth convert the degrees of the JF.quator intoYeers>Days and Hours; the fecond Table converts the Mi¬nutes thereof viz∗ of the JEquator) into Dayes and Hours ; for exam¬ple : I would know the Juft meafure of time, according to this rule∗ of the two former preceding Direfti-ons, viz. of the afeendant to the Yewies of c? and his Oppofitiou.

The afeendant, you may remem¬ber, is diftant from the T ernes of , who is ? remittor } n. degr. and 55. min.

By Naibod's compute, I would know the meafure of time agreeing to the 11. deg. and 5 5 . min.

With 1 r . degrees I enter the for¬mer of thefe Tables, and over againft it I find ti y. 53d. 2ih. viz∗ 11 yeers, 58 dayes, and 21 hours#

I then enter the latter Table of

the conversion of Minutes of the M-
quator into time : In the third Co¬
lumn, over againft 55/rain. I find
339. dayes and 17. hours ; I now put
both together 5

To ii. degrees 11 y. 58 d. 21 h.

To 55. minutes 00 339 17

Summe Ti ”7 97

Here is 1 1. yeers, and 397. dayes, .
and 38. hours.

I convert hours into dayes, and
put them together, and take a whole
yeere, viz . three hundred and fixty
five dayes from what remaines, and

then

then you (hall find it thus, 1 1 3 $7

24 hours

make one day to be added to 397.

Teers. Day, Hon.

So then it’s thus, 11 3 9$ 14

From three hundred and ninety eight dayes I fubduft three
hundred and iixty five dayes, viz,r a whole yeer, and addeit to
eleven yeers ; to then the alcendant comes to the Termer of <? ,
the Native being twelve yeers of age, thirty three dayes and
fourteen hours.

Afcendant to the cP of <? after nineteen degrees and fifty
two minutes: Nineteen degrees in the firfi: Table, give nine¬
teen yeers,an hundred and one dayes,feventeen hours .-fifty two

min.in the feeond TabLsggive three hundred twenty one dayes, foure hours ; added together, they make nineteen yeers, four hundred twenty two dayes, twenty one hours.

If I take three hundred fixty five dayes, or one whole yeer from fours hundred twenty two dayes there reils fifty feveu dayes, twenty one hours.

So then the Native's afcendant came to the cP of d1 , being aged twenty yeers, and fifty feven dayes, twenty one hours.

But to come neerer to the matter, Profefiions doe manifcft what yeers are like to be happy, what unhappy, by the Profe-ttions of the principal! cufps of the houfes, viz. the firft and tenth 5 for generally it is obferved, that thofe yeers which fall in a or A to the boro feope or Mid-heaven ,efpecially when as thofe houfes or Signes were Radically well fortified and fortu¬nate, that thofe are profperous yeers \ thofe who fall in □ or cP of thefe houfes, are unhappy, &c.

Againe, Profc&ions doe fhew who is the Lord or Governour of the yeer; and he is no other then the Lord of that Signe who afcends ; as if the beginning of a Signe afcend, then one Planet may be Bominuf Ami , or Lord of that yeer ; but if the middle of a Signe afcend, then there will be two Lords, viz. that Planet who rules thofe firft fifteen degrees afcending, and he that rules the next fifteen degrees fucceding; where note, you cannot expert the Dire&ion of any Significant in a Frofefti∗onall Figure above 30. degrees, &c.

How to judge upon a Figure of Projections ∗

IN the fir ft place confider the Sign afcending in the ProfeCti∗ what place it had in the Radix, whether it was one of the fuure Angles, or Succedants, or Cadents; whole Houle it was, wch ot the Planers is exalted cherein,of whofe Triplicity, whe¬ ther a good or evill Planet was r herein at the Radix, or if © or the Antifcion of any Planet was therein ; or whether a good or an infortunate Planet beheld that Signe, and with vhat afpeft; and whether out of a Signe commanding or t buying, or that agrees or disagrees in nature ; or whether it be a Signe of long or (hurt afeen lions ; or whether that part, which is now the cufpe of the houfe∗ is with any of the more nobk fix¬ ed Stars; or w hether the Degrees arifing are of thole wee 11 Light,Dtep, Pitted5Dark,Cloudy,or Azimene, augmenting or decreasing Fortune, &c.

For if the Signe of the Projection , as well in the Nativity as in this Progrdfionall Revolution be free from misfortune,and the Lord of that Signe Direft in both Figures, and in a Signe of his owne nature (whether the Gc niture was no&urnall or diurnal) If, I fay, he be ftrong in any of his own? elk nr i II dignities, be in a good heufeof heaven, as well in the Radix as in the Annuall Figure of the Revolution of the @ , to his place in the F adix ; ic is then a fare argument that the Native lhalJ fully accumplifh fach things to his owne content, a? the Lord of the yeer had Signification of in the Radix ; and it far¬ ther intimates,a ftrong conftitution of body,ftability of minde, and promiles in the general! that the yeer (hall be a faccesfull one. You may, if you pleafe, together with this judgement∗ for the health of the body nfider every yeer thefe five things, which by experience 1 have found yery true.

By confederation whereof, you may ex idly know the ft ate, condition and temperature of the body 5 how it varies, and what humour is molt in excefle, &c.

You mult next in order confider the Lord of the yeer, who is ever that Planet that is Lord of the Signe afcending in the Frofeftion ; and if it happen two Planets are Lords of the yeere^ as ufiially it will be fo 5 then youmuft limit unto each his time, thus j In a Figure of Profe&ion in our Nativity, where >£

If the Lord of the Yeer was in the Radix ftrong, but weake Judgments* in the revolution, it imports that in that yeer the indeavours of the Nitive will be but Weake, and his Adions according to the prop ti of that infelicity which at prefen t he fuffers.But if in the Radix the Lord* of che yeer was unfortunate and im- pedited,but in theprofedional revolution is wel difpofed and ftrong, it portends moderate goodneffe unto him whofe revo-

ludon you then handle, yet (hall he feare none ill, for the vi¬ gor and force of the Lord of the yeer in Annwall affaires is ve¬ ry powerfull. But it the Lord of the yeer by Projection and in the Radix , and in the ® his Annnall revolution be impedired, it indicates prejudice to the Native, according to their proper Signification : together with this, confider in what houfe or place the Lord of the yeer is in, as well in the Radix as Revo- lutionali Figure ; whe ther he be thong, or impediied; if he be. powerful] in two of the Figures, he portends good,and that the Native (hall have profit and live in good eftimation : if he be well difpofed in the two Figures, but not in any configura¬ tion unto the benevolent, the Native (hall obtaine fomekinde of goodnefie, but it will be leffe then expe&ed, nor will it con¬ tinue. If in both Figures he be unfortunate and cadent, but yet is in afpeft with good Planets, it argues but a finall increale of Eftate, yet verily it performes f mewhat.

If the Lord of the yeer be impedited of the Infortunes in both Figures, and was alfo in the Radix in □ or cP ofthtMa- levolents 5 it portends ad verficy, danger, and many enormities in that yeer. But if that Malevolent Planet hafttns to combu- flion, or to be Retrograde, it implies fome unreasonable ne- ceflity (hall oppreffe him of the nature of thofe Planets ; and if they be Angular, the greater (halJ be his misfortune. If the Lord of the yeer in both thefe Figures be not conftituted in an Angle, but is ill dignified; yet notwithftanding behald the Afccndant, the before mentioned evill (hall not be fo publique,

but (hall be onely taken notice of by his owne friends ; but if the Planets be in the 2, 6, 8, or 12. this milchance (hall be fmothered and kept feci et/o that none (hall know of it ; yet if thofe Planets are removed from the attendant, and then fome Planet in an Angle afpeft them,?fter a while there will be a dif- covery made, though at prefent it feemes to be kept clofe , &c. This is as much as I have found verified by experience of lame eminentNatividesj which I freelv publifk for benefit of P: fieri- ty ,&c. What is wrote of the Afcendant, will equally fer vt for all the other Houfes, if with diferetion you vary the Ruks.

- r ' . ■ . • . , . * r \ * .

WHen the ProgrdTion of the Afcendknt or the J) , fhall come to the firft Houfe, the Native is ufually cheerful!, and it implies a fit yeer to provide what is necefiary for the Body, cither Cloithes, Vi&ua>s, &c.

When to the fecond houfe, it's good to buy and fell Com¬ modities, and argues a proper time for encreafe of Eftate* When to the third, the N ative may profper in Journeys, and it inclines him to converfe with his Kinred and religi¬ ous men. , .

When to the fourth, he may expedtfome Inheritance, a ikw

Houle, or a blefling from his Parents ; he may fearch for Wealth out of the bowels of the Earth, or deale in Mines, &c. he may build or repaire ; yet the Native may be forrowfull , full of fear , in danger of Water, itt not good to goe long jour-

neys, 8tc. ' . .

When to the fift, the N itive takes pleafure according to hts

vf er8 , either at Schoole with his equals, or wtch women, if ca¬
pable, or according to the yeers of his age when this happens ;
it's g and to make Covenants) fend Letters, perfeft Accompts,

put on new Cloathes. , c

When to the hxt, he may feare a ficknefie, the hatred ot ma¬
ny vulgar people, continuing a long time : beware of ijl Ser¬
vants, make no Journeys, an ill time to deale in Merchandize,

In Contrafts, in Bargaines, &c. ...

When to the feventh, the Native is froward and impatient,

eafily inclined to Women and wantonneife, many open ene–
mi s aiifeagainft him, it's g iod to marry , the other Sipiificattrt
concurring ; oppreffed with wangling, v«.x«d with tu'.cs or
contentions; if the Native radically incline to Souldiery, it
now puts him forward, and inclines unto quarrelling.

death , if the Hyleg come to any mortall Dire&ion : It is not
good to make new Gontra&s, or to be too adventurous in
Trade, &c. 1

When to the ninth, it points out a convenient time to un¬
dertake long Journeys, it9s good to ftudy and to follow Learn¬
ing, and to be familiar with Church–men, to ftudy Chymiftry,
for it ftiewes a mind and fancy inclinable to curiolities, &c.

When to the tenth, the Native is inclinable to be ambitious,

or to endeavour Preferment, and to be converfan* with emi¬ nent men, Magiftrates, Nobles, &c. and he (if capable) attains Preferment, or publifce employment in the Common-wealth ;

It notes a fie time in the Tradefman to follow his employment with induftry, for it promifeth him much encreafe ; he may navigate or journey by Land or Sea with good fafety and re¬ putation, ftiall be much efteemed*

When to the eleventh, it fignifies a cheerful! heart and per- fon, the encreafe of the Native's Friends, it imports the yeer to be very profperous in all worldly affaires, and it invites the Native to beftirre himfelfe and husband time well, whereby he may much advance his private fortune; &c.

When to the twelft, the Native will be fickly, yet hardly find out or difcover the caufe, be in condnuall emnity with ill Neighbours, and none knowes for what £ he willbe in danger ofimprifonment or banifhment,or hiding his head, unlefle the twelft houfe in the Radix was fortunate, it imports an unlucky yeer for dealing in great Cattle, and advifeth the Native to be¬ ware of Horfmanihip, H or fe- races. See. The Ancients have here¬ in been tedious, and left very many rules, which by reafon of being ill tranflated out of the Arabic]^ by fuch as underftood not Affrologie , are in many things contradi&ory : I have there¬ fore omitted their further judgment upon the afeendant, onely concluding with this fbort vale9 That when the afeendant comes to the body of an Inf or tune 9 viz . to the Signe wherein one was, confider in what houfe of the Revolution that Infor¬ tune fals, becaufe the ill intended ftiall partake of the nature of that houfe, &c. they alfo judge much by the Lord- of the yeer, apd the Lords of every houfe ; you ftiall find in my judgment upon the Nativity fuceeding, how t© doe the like, See.

their Significations .

W Hen cither the Signe culminating in the Radix 9 or wherein then the ® was, (hall come to aicend in a From ^fettionall Revolution, the Native is then promifed good fortuue by his employments publick, by his Profeffion or Trade, or by fome Office or fervice he (hall performe for fome great perfon ; however, it denotes dominion or foveraignty if he be but a petty Conftable..

When to the fecond houfe, it's intended the Native ffiall then receive the profits of his former yeers employment, and (hall have in poffeffion that reward which was but formerly promifed him.

When to the third houfe, the Native may expe& but an in¬ different condition of life : for in regard it's the fixt houfe from the tenth, it intends more ill then good, viz . the Ioffe of Kinred, hatred of malicious Neighbours, or robbery in Jour¬ neying.

When to the fourth houfe, the Native's fame and eftimation is called in queftion, the Native and his Parents agree ill, and his Neighbours of more power then himfelfe doe fwell.

When to the fift, he that hath children, will much rejoyce with them ; he that hath none, inclines to be merry, jocund and wanton,to take his pleafure,fpending more then he gets.^ When to the fixt houfe,a convenient time and feafon to agi¬ tate certaine affaires belonging to his Family and to Husban¬ dry 5 but nothing fuccesfull to deale in matters or things ho- nourablf ,in which matter nothing will that yeer fucced well.

When to the feventh, then if the Native be capable, he may cxpeft an augmentation of his efteem and repute in the world, he may then be in the favour of women of great account, but will be in danger to bury fome of his Ancetfors.

When to the nnilh, it intends long Journeys, not for plea- dire onely, but to acq uire honour and renown, or to vifitfome noble perfon, or to goe in his Company : the Native (hall be much converfant either with Foreigners, or with men of ano¬ ther Country, or living a great diftance from the place of his abode.

When to the tenth,it promifeth a very (liceesfall and famous yeer, tending greatly to the Native's credit.

When to the eleventh, the Native hath great willingnefle to be kind to his friends, and is fo ; he receiveth mutual! refpe&s from his friends, augmenteth his number thereof, and liveth with great iolace and joy.

When to the twelft, he receives detriment in his reputation, honour and fame, or fhall lofe that frienddiip he formerly had with N rblemen or Magiilrates,only by envy, malice and back¬ biting Handers, and he may lofe fome of his Kinred.

When to the eleventh, the Native's friends ftands ftoutly unto feim, he games by dealing with them, and by lending out Moneys, his Eftate comes in freely 5 it's an admirable time to recover Debts in, or require any benefit from our Superiours.

When to the twelft he will be in danger of betraying or committing bafe a&s, and of lofing in Eitate by keeping or dealing in great Cattle, 8c c.

1 (hall not need to be copious in deliver¬ ing an exaft method how to judge of a Re¬ volution what is con¬ venient herein , and may benefit the Lear¬ ner, whereby to bet¬ ter his judgment, is as followcth.

To judge of a Revo • lutioiu

Compare the Figure of the Birth with that of the Revolution, and obferve how the cufps of the houfes, and rheir Lords, and the prineipall Significators doe agree or are difpofed; for upon a right undemanding thereof, the French of judgment in a Revolution depends.

If the afeendant of the Revolution doe agree, or be the lame with the afeendant of the Radix, it fignifieth good, viz . good Health, the Native's aft ions fucceeding profperoufly, together wi* h encreafeof his Subftance, if the Lord of the afeendant be alfu well dignified : if the L< rd of the afeendant becombufi", he threatens many mii chief, s unto the Narive, according to the nature of the Planet who is Lord of the yeer $ confideration alfo had to the © , and the hr life he is in and is Lord of : vet i the X be powerful!, or in her owne houle, or in any of her Effentidll dignities, efpccially in a nofturnal! Cendant in the Radix, or come to the Signe of ill houles,or fig-
nifying evill in the Radix, the Native will then receive Ioffe
and detriment in that yeer according to the nature of that
houle which the afcendant of the Revolution did fignifie in
the Radix : From hence it is that it the Sign of the fixt,twelft

tion, in that yeer the Native may feare fickneffes, imbecillity
of his body, or other very many cafual ties, principally ifthofe
houles in the Radix were unfortunate.

The Signe of the ieventh houfe in the Radix being the af¬
cendant of the Revolution, Ihewes many contentions and
brawlings in that yeer, and the Native deffrous of Marriage,
or that he will marry that yeer : And feeing that the Signifi-
cators of the Radix ought annually, or in every yeer to work
their effefts by the fignifications of thole houles in which they
are conftituted at the time of the Revolution j it followes here¬
upon, that in what houle of the Revolution you find the Lord
of the lecond, ® or V , the Native lhall have augmentation
of Patrimony or Eftate by things iignified by that houfe j fo
cbferve in the reft, &c»

When the afcendant of the Revolution comes to the hoftile

time then another, according to the dire&ions of other Pla¬ nets coincident with any wherein the Lord of the afcc ndant is concerned.

Our Native absolutely is a melancholy pcrfon (per fe) grave, auftere, of a firnie refolution, folitary, laborious, taciturne, nothing loquacious. See. The □ of cf to T? , induce him to be obftinate and a little wilfull, a tin&ure of malice remaining in him; for the Infor tunes are both fitted. See. thefe are the natu¬ ral qualities belonging to h 3 as here pofited and afpe&ed ; be– lides, Lome female infirmeneflTe naturally are ingrafted in him, which V in thehoufe of 2 , doth beftow on him in the

worfer fenfc, for though there is reception betwixt $ and T? ,

yet is there no afpe&, and that malevolent □ of d to T? is out of the feveiuh houle, the naturall houle Women, Love^,

Stc.and certainly thefe depraved manners would prevail?, and txtreamly predominate even to the great detriment of the Na¬ tive, if that 2 and the D were not in an ayeriall and humane Signe, and in A afpe£f, whereby the Native is refrained by urbanity and education from difeovering pub!ickly,or making ufe of his native and occult Saturnine conditions,and he in his younger yeers, until) h have finifhed hisfirft revolution, will be more tradable, more given to his delight, to be more neat and cleans in his apparell, totrimand adorne himfelfe, to be onely carefull of a competent fortune,- to be graceful!, lovely *and majefticall in his deportment : thefe later mentioned qua¬ lities are ofthe nature of 9 , (he being Lady of the Geniture.

The A of 2 and J> incite him unto Study and Learning, unto Travel! and fee many Countries ; fo that in conclufion, thus much is derived from the Pofiture of Heaven, that his Manners are fufficiendy laudable,' managed totally after an auftere and grave Comportment ; at fome times betwixt merry and melancholy, at other times wholly oppreffed with fad- ■nefte, and againe accidentally and for a (hort feafon pleafantly merry ; for upon the Direftion cf 2 to h his afpeft or Terms, he (hall find himfelfe more or lefle inclinable to covetoufnefft, folitarinefle3paitinacy, and what in the vulgar Engliflt we call Jogg edneffe ; but when the > either by Dire&ion comes to the bodyor afpe£t> or termesof 9 , or either of her houfesis the : 1 V ' , ' afeendant

that our Native is ingenious, and of a fufficient cud piercing underftanding, capible of any employment, that he will be delighted in fuch things and Sciences, as wherein properly the underftanding may be of efpeciall ufe : The defta which may be cafually in this Native's underftanding, is figmhed by 2 his combudion in a movable Signe, which may denote a diffidence or diftruft of his owne fufficiency,and fo caufe timidity and ho ftrong refolution in a&ing his owne conceptions ; and this 1

In one Scheam Mars being Lord of the tenth, in with]> 9 ® and 2 , doe abfolutely pronounce to the Native a Profefli- on, of what kinde we (hall difeover , the mixture or many af- pefts of all the Significators, argue that his Profeflion (hall not be one and the fame alwayes, but vary, according to the times and direftions of the Hilsgiacalls . The potency of $ in o' with ® and d* in the fcventh,and proximity of Significators to each others afpeft ; fay, he (hall trade or deale in (uch things as are ufefull for man and without which man may not well fubfifl: : this I judge, becaufe both 9 ® 9 and 2> are in humaine Signes : Mars in SI the houfe of the ® may denote in Mettals and Minerals, ofMartiall and folar condition. 9 reprefents Jewels, Bracelets, ornaments for Women. 9 fignifieth Ac- yiz fQ j)av^ €otmts,Merchandize*,in d with ® Solar bufinefles. Let the Na- ’ j live obferve what is fignified by ® $ or d and in fuchMerchan- ^^othts difes and by fuch men, he will attaine to, Preferment, Honour ' and eftimation in the world, which is by reafon thatLucidaLan- evs is neere the degree culminating, and Lucida Lyr& is ascend¬ ing : V eflentially ftrong and Lord of the i Ith and 9 in Cazimi with the © his repute is fignified to be very fplendid, fortunate and famous, according to the quality of his birth or profeflion he uleth : So that from hence I gather the Native (hall have a Calling, (hall live plentifully of it, and in much eftimation in all thofe places where he (lull relide; fo that what amongft men honourably defeended is honour in a drift fence, (hall be fame, reputation and a plentifull manner of living, in the courfe of life the Native is defigned for : and this is apertly Demonftrated by the being of ® with 9 . So that having examined the Profeffion or quality of the Materials the Native is to deale in ; and having confidered the Preferment or increafe he may expert thereupon, it refts onely tp give the Native this Caution, which generally he is to ufe during his life ; that according to the good Directions of Me* dium Cceli or © to benevolent Promhtors , he be more valiant and aCtive, & e coniram : my meaning is, that in thofe yeeecs when they come to fortunate afpeCh, he endevour with his Penny and induftry to make good ufe of thofe proper Directi¬ ons for better increafe bath of his effeeme and Credit in the World, -as alio for enlargement of his Fortune. ,

Judgment

upon Directions *

The moft fignificant dire&ions for this yeer are <3> M Antifc ,
r J : Now becaufe ^ in the radix is Lady of the feventh and
pofited in the fifth, moderately ftrong 5 this dire&ion may de¬

note (to one in a way of Commerce) much converfe and deal¬ ing with vulgar people of Lunar condition, and fome profit by Saylors, Widdowes, Gentlewomen, or the like 5 it may (hew many contra&s or bargaines with fuch like people, and alio profit by dealing in forraigne parts with fuch Commodities as are of the nature of Luna . It may (hew alfo, by reafon the D was in the lift in radice , that the Native may have much con- verfe with Meffengers, Favors, forraigne Agents (Embaffa- dours, if capable) and may (hew good encreafe of Subflance by

fuch men, and their meanes3&c.

The next Hylegiacall phce in order is i ad & ¥ without la- l titude ; the dire&ion is in the fixt and twelfth houfe, ¥ being Promittor , denotes the quality of the accident to happen ,and he was Lord of the eleventh, twelfth and had dominion in the fe- cond in the Radix, the event muft either be from fuch things as arc fisnified by ¥ in radice , as Lord of thofe houies, or elib

as he hath a generall fignification naturally. Being eflentially ftrong, we take the former and leave the latter judgement $yet it will doe well to thinke of both.

The Dir j&ion falling in thefixt, threatens a flight joviall difeafe by drinking or furfet, or diftempering the body 5 the reafon is, l was in the fifth viz . honfe (of good fellowfhip :) now 3) being figmficatrix in an aery fign and V in a fiery, may well denote the blood heated j for H is hot and moyft, and W* hot and d~y $ ergo, two fign ideations of blood heated. V was friend in Kadice>ergo, the difeafe will rather be feared then reall. Obferveby.the tranfit when peonies to the pi ace of the]> or two and twentieth of E ^and be carefull thofe times,and clenfe the blood by a gentle purge a weeke before the Signifieator and

Twnittor meet, or .the tranftt be. It imports fomegriefe (hall afflift the Native by reafon of fome unkindneile he (hall per¬ ceive from fome of his familiar acquaintance : and becaufe % is Lord of the twelfth and policed there, its not fafe to vifit a - ny imprifoned friends, left he himfelfe come to have fome re- ftraint of liberty by information of a Lunar man. Men repre- fented by % are probably like to be much prejudiciall to the Native this yeer, viz • Gentlemen, Clergy,. Lawyers, but Gen¬ tlemen efpecially . It forewarns the Native to be careful]' of his money, left Gentlemen get more in an houre then they -pay in a yeer , Is not V Lord of the fecond LUntill the direction is over, its not good to be late in Tavernes,8tc.

The ill intended muft come from the eleventh houfe,twelfth or fecond. Ergo , .the Afoendant comes alfo towards Augujl to the Coitnntijcion of the 3) with latitude, which argues fome difficulty in the Natives affaires, and much adoe to keepe him- ielfe free from fome that would have imployment from him,or with him^ QX would have him adventure to fome Countrey or other: and it doth intimate fome afperfion or fcandall by meanes of an ill conditioned Woman ; and* fome confump- tionef Subftanceby more then one. Amdthisis further con¬ firmed by d* his Contrantifcion of 9 about March next, at what time X comes to cP of % : and indeed that may alfo de¬ note fome prejudice by vulgar Women, See. Here's ho premi- fing. afpeft of any preferment this, yeer, for d" comes to an ill * dirt&iom

Judgment upon Nativities.

dire&ion of the © , who was fo weaken the Radix he can per- forme nothing upon the matter to doe good in point of pre* ferment : this Contrantifcion of d to ® , cT being Lord of the third and tenth, and ® of the eighth, may denote fome prejudice in matter of Inheritance or Patrimony,&c. by means of Kindred or Souldiers.

The comming of 5 to his owne termes and U to a Sefqui - quintW>o£ 2 , doe argue the Native to delight in Bookes, read¬ ing , and to be grave, auiiere and religioufly inclined. I had forgot the fefquiqidntili of V to h with fals in the Signe afcen- ding, viz* v? : this is a good afpeft, and fnew the Native to be according to the twolaft Dire&ions, more grave,and folitary,

and inclinable to ftudy then formerly 5 and it doth alfo (eerrre to take off much of the malice of former Dire&ions, in regard y was friend in the Rad ix, and T? Lord of the afcendant.

There remaines but two more Dire&ions, d ad term, d 5 & ad^ T? ; they happen in it? ,in which fign ® was radically in,arid whofeLoidwas extreamly impedited ; its a confirmation of an endeavour to be ufed to annihilate fome legacy or portion of Land which might accrew to our Native by the deceafed, oc∗ of Moneys due to him jfuch a thing might or may be intended.

And yet becaufe % in the Revolution is in the place of the }) and in the eighcHoufe, it feems the Native may rather feare then have prejudice that way, although d be alfo in the eight. Theafcendantof the revolution is ni , his Lord both $ ' and 2) applying to his □ (Caveal a MulieribuF) hoc anno. The po¬ rtion of h Lord of the afcendant in the radix,now in the fixt, may produce the head ,ach and fome Melancholly fancies 5 the rather bccaufe ® is hafkning to c P of him. But forafmuch as no Planet afiliSs the afcendant,and that all are above the eat :h h excepted, 2 and }) in d , and Fi in the radicail place of

The returne of & to the cufpe oftheafcendant of the eleventh of the Radix, and neer Cor Scorpii , may denoat hidden death to one of this Natives friends by fword or fire. Johannes Zinckius, De crifibus, fixteens, Francofurt 1 609.
Alphonfus Zobolus, De Direcnonibus, folio , Vincentise 1 62c,

There may happily be many more Authors extant who liave written of Aflrologie, but no more have as yet come unto my hands ; thefe 1 mention are all my own ,&c. many of thele perhaps have been iince printed at other places : Indeed Ftolomey hath been printed in folio, in quarto, in octavo, in fixteens, and hath been tranflated feverall times out of Greckjnto Latin : that lately printed at Leiden I conceive to be the mod exa£t> it was performed by Ailatius, &c. In a word, feme may blame me that I write in the Englijh tongue yet I truft I have offended no man, fith I write in my owne Language ; and to fuch as fpeak as I fpeak 5 nor doe I know that it is forbid unto man to write in his owne Language, or is any man bound to readorheare

Ouooo 2 that

I

that contenteth him not : If this Book doe generally pleafe, I fhall account him good, and think him worthy to live 5 but if he difpleafe, I then beleeve the memory of it (hall foon perifti* and my felfe (hall count kill: If notwithftanding this, mine Accufers will not be fatisfied with this common judgment, let them content themfelves with the judgment of the time, which at length difcovereth the privy faults of every thing : which becaufe it is the father of truth, it gives judgment without paf-fion, a*nd accuftometh evermore to pronounce true fentence of
